Student Exploration: Seed Germination

Vocabulary: controlled experiment, germinate, hypothesis, mean, seed, trial, variable

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

Plants that produce fruit or vegetables grow from **seeds**. Suppose you want to start a vegetable garden using seeds. How could you get the seeds to sprout?

We could get the seeds to sprout through germination, germination is a way to grow a seeds roots and essentially "wake it up" from it's dormant condition. By having the right amount of heat, moisture/water, and sometimes light, these seed could develop roots so that you can grow them in soil.

Gizmo Warm-up

Seeds are only able to sprout, or **germinate**, under the right conditions. The seeds of different species of plants need different amounts of light, temperatures, and moisture levels in order to germinate successfully.

In the *Seed Germination Gizmo*, you will perform a series of experiments to determine the best conditions for germinating three different types of seeds.

1. Look at the DESCRIPTION tab. How many seeds are in the germination chamber? 100
2. Click **Play** () and observe the SIMULATION pane.
 - A. What happened over the simulated five-day period? During a five-day period, the seeds slowly start to sprout (started sprouting around the end of the 2nd day and beginning of 3rd day), at first only a few sprouted. Near the end of the 4th and 5th days, around 50% of the seeds sprouted.
 - B. How does the appearance of a seed on the SIMULATION pane change once the seed has sprouted? When the seed has sprouted, the seed's appears to have grown it's roots. These roots look to be growing upwards
 - C. How many seeds sprouted? After replaying the simulation, an average of 50% of seeds sprouted.
