CROWS

Members of the crow family live on all continents of the world except Antarctica.

There are about 117 crow species including jackdaws, rooks, ravens, nutcrackers, choughs, jays as well as common crows.

Some crows use tools such as hooked twigs and sharp-ended stems to extract grubs from trees.

Crows are very intelligent birds and ravens are even able to count up to 5 or 6.

Crows also hold funerals for a deceased member of their group, which makes them special from other animals.

Crows are bold and aggressive. They have a strong body, strong legs and a powerful beak that can deal with nuts, seeds and even small prey.

Birds:

Crows are omnivorous and eat anything, which is why they are called scavengers. They feed on invertebrates, leftovers of human food, eggs, seeds, and young nestlings of other bird species from their nest. They also feed on stranded fish and grains.
