KS **Teaching Mathematics to English Language Learners** Gladis Kersaint, Denisse R. Thompson, Mariana Petkova, 2014-06-05 Today's mathematics classrooms increasingly include students for whom English is a second language. Teaching Mathematics to English Language Learners provides readers a comprehensive understanding of both the challenges that face English language learners ELLs and ways in which educators might address them in the secondary mathematics classroom. Framed by a research perspective, Teaching Mathematics to English Language Learners presents practical instructional strategies for engaging learners that can be incorporated as a regular part of instruction. The authors offer context-specific strategies for everything from facilitating classroom discussions with all students to reading and interpreting math textbooks to tackling word problems. A fully annotated list of math web and print resources completes the volume, making this a valuable reference to help mathematics teachers meet the challenges of including all learners in effective instruction. Features and updates to this new edition include: An updated and streamlined Part 1 provides an essential overview of ELL theory in a mathematics-specific context. Additional practical examples of mathematics problems and exercises make turning theory into practice easy when teaching ELLs. New pedagogical elements in Part 3 include tips on harnessing new technologies, discussion questions, and reflection points. New coverage of the Common Core State Standards as well as updates to the web and print resources in Part 4.

Articulations Between Tangible Space, Graphical Space and Geometrical Space Claire Guille-Biel Winder, Teresa Assude, 2023-08-22 This book aims to present some of the latest research in the didactics of space and geometry, deepen some theoretical questions, and open up new reflections for discourse. Its focus is as much on the approach of geometry itself and its link with the structuring of space as it is on the practices within the classroom: the dissemination of resources, the use of different artefacts, and the training of teachers in this field. We study how spatial knowledge, graphical knowledge, and geometric knowledge are taken into account and articulated in the teaching of space and geometry in compulsory schools, teaching resources, programs, and textbooks, and current teacher training. We question how the semiotic dimension, language, gestures, and signs of geometric activity can be taken into account, and we identify the role of artefacts, digital or tangible, in the teaching and learning of geometry. This book brings together some fifteen contributions from French-speaking researchers from different countries: France, Switzerland, and Canada.
