

Student Exploration: Measuring Motion

Vocabulary: distance, speed

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

The **speed** of an animal is how fast it is moving. A speed of 6 m/s (meters per second) means that the animal moves a **distance** of 6 meters every second.

1. How would you measure the speed of an animal?
The distance and how long it took to move.
2. What do you think are the fastest animals?
Cheetah, Pronghorn

Gizmo Warm-up

You have been sent on an African safari by *International Geography* magazine. Your assignment is to find the fastest land animals in the world. Your only tool is a video camera.

The safari is shown in the *Measuring Motion* Gizmo.

1. On the SAFARI ADVENTURE tab, wait for an animal to pass by. Press the **record** button (●). Press **stop** (●) when the animal has passed by.
 - A. Which animal did you record? Giraffe
 - B. Was the animal walking or running? Walking
2. Select the **PLAYBACK** tab. Practice using some of the different buttons on this tab:
 - Use the **Play** (▶) button to replay the simulation.
 - Click **Rewind** (◀) to go back to the beginning.
 - Click **Advance frame** (⏭) to move forward exactly one second at a time.
 - Click **Tools** at upper left, and drag some **arrows** (➡) onto the recording to mark the positions of the animals at different times.
 - Use the **Time** slider to go to a specific time.

Activity A:

Estimating speed

Get the Gizmo ready:

- Select the SAFARI ADVENTURE tab.
- Remove all **arrows** from the screen.
- A calculator is recommended for this activity.

Embracing Diversity in the Learning Sciences Yasmin B. Kafai, 2012-10-12 More than a decade has passed since the First International Conference of the Learning Sciences ICLS was held at Northwestern University in 1991. The conference has now become an established place for researchers to gather. The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences ISLS. The theme of this conference is Embracing Diversity in the Learning Sciences. As a field, the learning sciences have always drawn from a diverse set of disciplines to study learning in an array of settings. Psychology, cognitive science, anthropology, and artificial intelligence have all contributed to the development of methodologies to study learning in schools, museums, and organizations. As the field grows, however, it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems. This demands attention to new kinds of diversity in who, what, and how we study, and to the issues raised to develop coherent accounts of how learning occurs. Ranging from schools to families and across all levels of formal schooling from pre-school through higher education, this ideology can be supported in a multitude of social contexts. The papers in these conference proceedings respond to the call.

Motion Jennifer Lawson, 2001 The nine lessons in this module introduce students to concepts related to linear, rotational, reciprocating, and oscillating motion. Students investigate how machines can change the direction of motion and also explore kinetic energy and friction. As well, students examine common devices that use or produce motion and use this knowledge to design and construct their own moving toys. Also included are materials lists, activity descriptions, questioning techniques, activity centre and extension ideas, assessment suggestions, activity sheets, and visuals. The module offers a detailed introduction to the Hands On Science program, guiding principles, implementation guidelines, an overview of the skills that young students use and develop during scientific inquiry, a list of children's books and websites related to the science topics introduced, and a classroom assessment plan with record-keeping templates.

Collected Papers of Carl Wieman C. E. Wieman, 2008 Carl Wieman's contributions have had a major impact on defining the field of atomic physics as it exists today. His ground-breaking research has included precision laser spectroscopy using lasers and atoms to provide important table-top tests of theories of elementary particle physics, the development of techniques to cool and trap atoms using laser light, particularly in inventing much simpler, less expensive ways to do this, the understanding of how atoms interact with one another and light at ultracold temperatures, and the creation of the first Bose-Einstein condensation in a dilute gas and the study of the properties of this condensate. In recent years, he has also turned his attention to physics education and new methods and research in that area. This indispensable volume presents his collected papers with annotations from the author, tracing his fascinating research path and providing valuable insight about the significance of the works. Koot, 2018 Reveals the little known history of one of history s most famous maps and its maker Tucked away in a near forgotten collection Virginia and Maryland as it is Planted and Inhabited is one of the most extraordinary maps of colonial British America Created by a colonial merchant planter and diplomat named Augustine Herrman the map pictures the Mid Atlantic in breathtaking detail capturing its waterways coastlines and communities Herrman spent three decades travelling between Dutch New Amsterdam and the English Chesapeake before eventually settling in Maryland and making this map

Although the map has been reproduced widely the history of how it became one of the most famous images of the Chesapeake has never been told A Biography of a Map in Motion uncovers the intertwined stories of the map and its maker offering new insights into the creation of empire in North America The book follows the map from the waterways of the Chesapeake to the workshops of London where it was turned into a print and sold Transported into coffee houses private rooms and government offices Virginia and Maryland became an apparatus of empire that allowed English elites to imaginatively possess and accurately manage their Atlantic colonies Investigating this map offers the rare opportunity to recapture the complementary and occasionally conflicting forces that created the British Empire From the colonial and the metropolitan to the economic and the political to the local and the Atlantic this is a fascinating exploration of the many meanings of a map and how what some saw as establishing a sense of local place could translate to forging an empire
