

## 17.1 Genes and Variation

### Lesson Objectives

- LO1 Define variation in genetic terms.
- LO2 Identify the sub-systems of genetic variation in a population.
- LO3 Show when necessary the number of phenotypes for a trait.

### Lesson Summary

**Quantitative versus Qualitative Theory:** Mendel's original ideas were seen for qualitative genetic traits.

- 1. Mendel's theory showed that traits are controlled by genes and that every gene has an alternative form, or allele. The inheritance of different alleles by an individual's offspring showed alternative sets of phenotypes, not blending.
- 2. Genetic variation and inheritance are studied in populations. Mendel's idea of a population often a natural group of genes called a **gene pool**.
- 3. **Allele frequency** is the number of times an allele occurs in a gene pool. It is equal to the number of times that allele for the trait occurs. Allele frequency, Mendel's theory, provided for no change in allele frequency in a population.

**Number of Genetic Variations:** The basic units, number of genetic variation, are sometimes, genetic recombination during sexual reproduction, and sexual gene transfer.

- 1. A mutation is one change in a sequence of DNA.
- 2. Beneficial differences are due to genetic recombination during sexual reproduction. The most basic units, allele pools, determine the basic genetic inheritance. Genetic recombination also causes change, recombination is random.
- 3. **Genotype transfer** is the genetic gene transfer, not reproduction, another variation that is not in offspring.

**Single Gene and Polygenic Traits:** The number of different phenotypes for a gene and allele varies from one gene, called the trait.

- 1. A **single gene trait** is controlled by one gene. An example is sickle cell anemia, a disease of red blood cells.
- 2. A **polygenic trait** is controlled by two or more genes, and each gene called that gene is controlled by the number of different alleles, and is called.

### Quantitative versus Qualitative Theory

For Question 1-4, complete each sentence by writing the correct word or words.

- 1. Mendel's theory was seen as an experiment's \_\_\_\_\_ rather than as \_\_\_\_\_.
- 2. His \_\_\_\_\_ consisted of the genes, including the alleles for each gene, that are present in a population.
