

## 6.1 Inventory systems

A business can decide which of the following two **inventory systems** to use to record and control their inventory.

SYSTEM	IMPORTANT POINTS
Perpetual	<ul style="list-style-type: none"> <li>a) Entries are made in a Balance Sheet account called trading stock (an asset account) every time goods are bought and sold.</li> <li>b) Cost of sales needs to be calculated and recorded every time goods are sold.</li> <li>c) When stock is purchased the trading stock account is debited with the cost price (the asset is increasing).</li> <li>d) When stock is sold the trading stock account is credited with the cost price (the asset is decreasing).</li> <li>e) Any additional costs when purchasing stock are debited to the trading stock account (e.g. carriage on purchases).</li> <li>f) This system is better for the internal control of inventory.</li> </ul>
Periodic	<ul style="list-style-type: none"> <li>a) Businesses would decide to use this system when it is not always feasible to calculate cost of sales every time goods are sold.</li> <li>b) Stock purchases are recorded in a nominal account called purchases (an expense account).</li> <li>c) Additional expenses when purchasing stock (e.g. carriage on purchases) are recorded separately in a nominal account called carriage on purchases (an expenses account).</li> <li>d) Cost of sales is therefore only calculated periodically by using the formula:  <math display="block">\text{Opening stock} + \text{purchases} + \text{carriage on purchases} + \text{import duties} + \text{customs duties} - \text{closing stock} = \text{cost of sales}.</math> </li> </ul>
