This transformation affects the country in many ways economic social psychological and also ecological. Ecological problems are strongly connected with the political economic and psychological inheritance of the past as well as with changes in the post communist society. In order to understand these problems it is necessary to consider the following issues: the geographic situation of Poland, the political transformations that occurred after World War II, forced development of heavy industry combined with neglect of its effects on the environment and the economic problems. The three main goals of *Environmental Engineering V* are: I to assess the state of scientific research in various areas of environmental engineering, II to evaluate organizational technical and technological progress in contributing to ecological security and III to determine the place of environmental engineering in sustainable development taking into account political and economic conditions. *Environmental Engineering V* is of interest for academics, engineers and professionals involved in environmental engineering seeking solutions for environmental problems in emerging new democracies especially those who plan to participate in numerous projects sponsored by the European Union. **Current Catalog** National Library of Medicine (U.S.), 1979 First multi year
