

7.3 Gene Linkage and Mapping

18.03 3F, 6H

- Linkage maps estimate distances between genes.
 - The closer together two genes are, the more likely they will be inherited together.
 - Cross-over frequencies are related to distances between genes.
 - Linkage maps show the relative locations of genes.

Hackshaw, 2015-03-02 *A Concise Guide to Observational Studies in Healthcare* provides busy healthcare professionals with an easy to read introduction and overview to conducting analysing and assessing observational studies It is a suitable introduction for anyone without prior knowledge of study design analysis or conduct as the important concepts are presented throughout the text It provides an overview to the features of design analyses and conduct of observational studies without using mathematical formulae or complex statistics or terminology and is a useful guide for researchers conducting their own studies those who participate in studies co ordinated by others or who read or review a published report of an observational study Examples are based on clinical features of people biomarkers lifestyle habits and environmental exposures and evaluating quality of care [Study Guide and Solutions Manual](#) Bruce A. Goel, 2022-08-18 Genomic selection GS is a promising tool in the field of breeding especially in the era where genomic data is

becoming cheaper The potential of this tool has not been realized due to its limited adaptation in various crops Marker Assisted Selection MAS has been the method of choice for plant breeders while using the genomic information in the breeding pipeline MAS however fails to capture vital minor gene effects while focusing only on the major genes which is not ideal for breeding advancement especially for quantitative traits such as yield The main aim of statistical methodologies coming under the umbrella of GS on using the whole genome information is to predict potential candidates for breeding advancement while optimizing the use of resources such as land manpower and most importantly time Lack of proper understanding of the methods and their applications is one of the reasons why breeders shy away from this tool The book is meant for biologists especially breeders and provides a comprehensive idea of the statistical methodologies used in GS guidance on the choice of models and design of datasets The book also encourages the readers to adopt GS by demonstrating the current scenarios of these models in some of the important crops among oilseeds vegetables legumes tuber crops and cereals For ease of implementation of GS the book also provides hands on scripts on GS data design and modeling in a popular open source statistical program Additionally prospective in GS model development and thereby enhancement in crop improvement programs is discussed

Computational tools in inferring cancer tissue-of-origin and molecular classification towards personalized cancer therapy, Volume III Min Tang, Jialiang Yang, Cheng Guo, Ling Kui, 2024-09-25 Our second Research Topic in this series Computational tools in inferring cancer tissue of origin and molecular classification towards personalized cancer therapy Volume II <https://doi.org/10.1186/s14361-024-01436-1> has over 8 accepted articles and further manuscripts currently under review Due to the continued success of these Research Topics and the interest in the subject we will launch a third volume on the same topic Inferring cancer tissue of origin and molecular classification are two critical problems in personalized cancer therapy It is known that there are about 5% cancers of unknown primary CUP site These kinds of patients are under empirical chemotherapy which leads to a very low survival rate Thus it is important to infer cancer tissue of origin However experimental methods usually fail to identify the exact tissue of origin even after the death of a patient which provides a need for computational methods especially in the era of big biomedical data Based on the finding that gene expressions of metastasis cancer cells are more similar to those of original tissue than metastasis tissue there have been a few computational methods developed in this area However the accuracy of the methods is yet to be improved to assure a clinical usage In addition to CUP inferring cancer tissue of origin is also important in avoiding misdiagnosis even if the cancer origin
