Cycles of Matter

Section 3-3

Recycling in the Biosphere

Unlike the one-way flow of energy, matter is recycled within and between ecosystems.

Elements, chemical compounds, and other forms of matter are passed from one organism to another and from one part of the biosphere to another through **Biogeochemical Cycles**. **Biogeochemical Cycles** connect 3 aspects of the biosphere, which are:

1. Biological
2. Geological
3. Chemical

Water Cycle

Evaporation is the process by which water changes from liquid form to an atmospheric gas.

Water can also enter the atmospheric by **Evaporating** from the leaves of plants in the process of **Transpiration**.

Nutrient Cycles

Nutrients are the chemical substances that an organism needs to sustain life.

Every living organism needs **Nutrients** to build tissues and carry out essential life functions. Like water, **Nutrients** are passed between organisms and the environment through **Biogeochemical Cycles**.

Nitrogen Fixation is a process where bacteria, which live in the soil and on the roots of plants called legumes, convert nitrogen gas into ammonia.

Denitrification is a process where bacteria convert nitrates into nitrogen gas.

Nutrient Limitation

Primary Productivity is the rate at which organic matter is created by producers in an ecosystem.

A **Limiting Nutrient** is a single substance in an ecosystem that is scarce or cycles very slowly.

An **Algal Bloom**, results from a large input of a **Limiting Nutrient** into an aquatic ecosystem.

Cataclysms Michael R. Rampino,2017-08-22 In 1980 the science world was stunned when a maverick team of researchers proposed that a massive meteor strike had wiped the dinosaurs and other fauna from the Earth 66 million years ago Scientists found evidence for this theory in a crater of doom on the Yucat n Peninsula showing that our planet had once been a target in a galactic shooting gallery In Cataclysms Michael R Rampino builds on the latest findings from leading geoscientists to take neocatastrophism a step further toward a richer understanding of the science behind major planetary upheavals and extinction events Rampino recounts his conversion to the impact hypothesis describing his visits to meteor strike sites and his review of the existing geological record The new geology he outlines explicitly rejects nineteenth century uniformitarianism which casts planetary change as gradual and driven by processes we can see at work today Rampino offers a cosmic context for Earth s geologic evolution in which cataclysms from above in the form of comet and asteroid impacts and from below in the form of huge outpourings of lava in flood basalt eruptions have led to severe and even catastrophic changes to the Earth s surface This new geology sees Earth s position in our solar system and galaxy as the keys to understanding our planet s geology and history of life Rampino concludes with a controversial consideration of dark matter s potential as a triggering mechanism exploring its role in heating Earth s core and spurring massive volcanism throughout geologic time The Standard ,1922 **Catalogue of the Public Documents of the ...
