Radiation Damage of Structural Materials J. Koutský, J. Kocík, 2013-10-22 Maintaining the integrity of nuclear power plants is critical in the prevention or control of severe accidents This monograph deals with both basic groups of structural materials used in the design of light water nuclear reactors making the primary safety barriers of NPPs Emphasis is placed on materials used in VVER type nuclear reactors Cr Mo V and Cr Ni Mo V steel for RPV and Zr Nb alloys for fuel element cladding The book is divided into 7 main chapters with the exception of the opening one and the chapter providing a phenomenological background for the subject of radiation damage Chapters 3-6 are devoted to RPV steels and chapters 7-9 to zirconium alloys analysing their radiation damage structure changes of mechanical properties due to neutron irradiation as well as factors influencing the degree of their performance degradation The recovery of damaged materials is also discussed Considerable attention is paid to a comparison of VVER type and western type light water materials This monograph will be of great value to postgraduate students in nuclear engineering and materials science and for designers and research workers in nuclear energy Organic Chemistry Study Guide with Solutions Manual Neil E. Gerrard, 1996 In Whose Backyard Whose Risk environmental lawyer professor and commentator Michael B Gerrard tackles the thorny issue of how and where to dispose of hazardous and radioactive waste In Whose Backyard Whose Risk environmental lawyer professor and commentator Michael B Gerrard tackles the thorny issue of how and where to dispose of hazardous and radioactive waste Gerrard who has represented dozens of municipalities and community groups that have fought landfills and incinerators as well as companies seeking permits clearly and succinctly analyzes a problem that has generated a tremendous amount of political conflict emotional anguish and transaction costs He

proposes a new system of waste disposal that involves local control state responsibility and national allocation to deal comprehensively with multiple waste streams Gerrard draws on the literature of law economics political science and other disciplines to analyze the domestic and international origins of wastes and their disposal patterns Based on a study of the many failures and few successes of past siting efforts he identifies the mistaken assumptions and policy blunders that have helped doom siting efforts Gerrard first describes the different kinds of nonradioactive and radioactive wastes and how each is generated and disposed of He explains historical and current siting decisions and considers the effects of the current mechanisms for making those decisions including the hidden economics and psychology of the siting process A typology of permit rules reveals the divergence between what underlies most siting disputes and what environmental laws actually protect Gerrard then looks at proposals for dealing with the siting dilemma and examines the successes and failures of each He outlines a new alternative for facility siting that combines a political solution and a legal framework for implementation A hypothetical example of how a siting decision might be made in a particular case is presented in an epilogue

Quantum Precision Measurement and Cold Atom Physics Jingbiao Chen,Xuzong Chen,Fang Fang,Hong Guo,Zhiwen Liu,Yanhui Wang,Xiaoji Zhou,2022-09-23 Ever since the invention of the cesium atomic clock in 1955 quantum frequency standards have seen considerable development over the decades as a representative of quantum precision measurement The progress in frequency measurements achieved in the past allowed one to perform quantum precision measurements of other physical and technical quantities with unprecedented precision whenever they could be traced back to a frequency measurement Using atomic transitions as frequency reference quantum frequency standards are far less susceptible to external perturbations and the identity of microscopic particles allows easy replication of a quantum standard with the same frequency With laser cooling and trapping cold atomic ensembles eliminate Doppler shift broadening and have become the go to quantum reference when precision and new physics are pursued The advancement of laser cooling and cold atom physics in addition to novel physical matter states such as Bose Einstein Condensation give rise to new experimental techniques in quantum precision measurement especially quantum frequency standards such as cesium fountain clocks dictating the SI second as well as optical lattice clocks and single ion optical clocks pushing the frontier of quantum metrology Other areas of quantum metrology such as gravimeters and magnetometers also benefit greatly from cold atoms For practical applications quantum frequency standards are usually required to be compact and portable and thermal atoms in the form of atomic beams or vapor cells are utilized Commercially available quantum frequency standards such as cesium beam clocks or rubidium clocks have become the cornerstone of navigation and timekeeping Compact optical clocks based on various laser spectroscopic techniques have also been developed As researchers strive to break through the limits of accurate quantum measurement and atomic temperature new fields such as precise measurement quantum computing and quantum simulation based on cold atoms are further opened up and challenges still exist to explore new physical phenomena in the field of cold atoms In honor

of Prof Yiqiu Wang on the occasion of his 90th birthday the main goal of this Research Topic is to provide a platform to exhibit the recent achievements and reveal the future challenges in quantum precision measurement as well as studies of cold atom physics with quantum metrology closely related to the long term scientific research areas of Prof Yiqiu Wang Both Original Research and Review articles are encouraged Topics of interest to this collection include but are not limited to Quantum precision measurements Microwave atomic clocks and their applications Optical frequency standards laser spectroscopy and their applications Quantum measurement based on cold atom Quantum computation and quantum simulation based on cold atom United States Educational, Scientific and Cultural Motion Pictures and Filmstrips United States.
