Chemical Changes

Read the passage and answer the following questions:

1. What are the products of this chemical reaction?

As exemplified in the decomposition of hydrogen peroxide, the breaking of molecules in this chemical reaction, the products are molecules that are not present in H_2O_2 , and the decomposition reaction is a chemical change. In this case, it is a chemical change because the molecules are broken and new molecules are formed.

2. What is the reactant in this chemical reaction? Is it a solid, liquid, gas, or a mixture of two or more states of matter?

2. What is the physical state of the reactant? Is it a solid, liquid, gas, or a mixture of two or more states of matter? The reactant, hydrogen peroxide, is a liquid at room temperature. It is a chemical change because the molecules are broken and new molecules are formed. The reaction is a chemical change because the molecules are broken and new molecules are formed.

3. According to the law of conservation of mass, if hydrogen peroxide decomposes, the mass of the products is the same as the mass of the reactant. Is this true?

Yes, it is.

4. What is the chemical formula of the product? Is it a solid, liquid, gas, or a mixture of two or more states of matter?

4. What is the chemical formula of the product? Is it a solid, liquid, gas, or a mixture of two or more states of matter?
