

1. Executive Summary

The purpose of this vulnerability scan is to gather data on Windows and third-party software patch levels on specified hosts in the domain. The audit was performed on "DATE" using Nessus v8.2.2.

Of the 35 hosts identified, 32 systems were found to be active and were scanned. A total of 447 unique vulnerabilities were found during this scan. Critical, high, and medium severity vulnerabilities were found to exist across all 32 systems.

Vulnerability Risk	Unique Count
Critical Severity Vulnerabilities	44
High Severity Vulnerabilities	309
Medium Severity Vulnerabilities	84
Low Severity Vulnerabilities	10

The vulnerabilities found on Windows hosts consist of outdated Windows patches and third-party software including Google Chrome and Adobe Flash. Systems were also found to be missing patches from 2014. Older vulnerabilities present a more significant risk as malicious actors will often automate exploitation of known vulnerabilities in an attempt to catch the lowest hanging fruit. Therefore, we strongly recommend applying the latest patch to the outdated software as soon as possible.

The vulnerabilities found on the HP switches consist of TLS/SSL certificate vulnerabilities and deal mainly with using outdated encryption suites. Though outdated/self-signed certificates on internal devices are not as high risk as the same on external facing devices, proper, up-to-date SSL certificates should be installed to meet best practice. Additionally, switches were found to be running variations of 3 versions of firmware; these switches should be updated to the newest firmware supported by the vendor.

It is our recommendation that immediate action be taken to resolve these vulnerabilities by applying patches and adjusting system configurations as necessary.

In addition, a patch and configuration management process should be implemented to continually assess system risk level as vulnerabilities are discovered. This will ensure relevant security patches and configurations are applied in a timely manner.

2. Scan Results

We have included supplemental material to this report consisting of the Nessus scan results and Nessus report.

Scan Results - The scan results provide granular detail of each vulnerability, which are categorized by their severity: critical, high, medium, and low. An expanded definition of the known threat and solutions for remediating the vulnerability are also available.

Nessus Report – The Nessus Report provides a comprehensive analysis of the scan results.

[Securing Citrix XenApp Server in the Enterprise](#) Tariq Azad,2008-08-08 Citrix Presentation Server allows remote users to work off a network server as if they weren t remote That means Incredibly fast access to data and applications for users no third party VPN connection and no latency issues All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users Unfortunately these same features make Citrix just as dangerous to the network it s running on By definition

Citrix is granting remote users direct access to corporate servers achieving this type of access is also the holy grail for malicious hackers To compromise a server running Citrix Presentation Server a hacker need not penetrate a heavily defended corporate or government server They can simply compromise the far more vulnerable laptop remote office or home office of any computer connected to that server by Citrix Presentation Server All of this makes Citrix Presentation Server a high value target for malicious hackers And although it is a high value target Citrix Presentation Servers and remote workstations are often relatively easily hacked because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix The problem in other words isn't a lack of options for securing Citrix instances the problem is that administrators aren't using them eWeek October 2007 In support of this assertion Security researcher Petko D Petkov aka pdp said in an Oct 4 posting that his recent testing of Citrix gateways led him to tons of wide open Citrix instances including 10 on government domains and four on military domains The most comprehensive book published for system administrators providing step by step instructions for a secure Citrix Presentation Server Special chapter by Security researcher Petko D Petkov aka pdp detailing tactics used by malicious hackers to compromise Citrix Presentation Servers Companion Web site contains custom Citrix scripts for administrators to install configure and troubleshoot Citrix Presentation Server
