Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Label one of the **skulls** below as human and the other as a chimpanzee skull.

Human

Chimpanzee

2. What features did you use to identify which skull was human and which was chimpanzee?

The features I used to identify which skull was human was the size of the jaw, and how much it protruded, as well as the size of the brain, and the size and shape of the teeth.

Gizmo Warm-up

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution.

Using the *Human Evolution – Skull Analysis* Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front view** of the *Homo sapiens* (modern human) skull. Then, use the **Select skull** menu to examine the same view of the *Pan troglodytes* (chimp) skull.

How do the skulls compare? The skull of Homo-Sapiens has a much larger skull than the chimpanzee. The chimp has a much larger and wider jaw with much larger canine teeth while the human has small teeth with a small jaw. The chimps skull is much smaller and is not as wide as the Homo Sapiens.

2. Now, examine the **Bottom view** of the two skulls. How do they compare? When it is turned to the bottom view, the skull of the human is much different from the skull of the chimp. The chimps has much bigger and longer teeth than the human. The chimp also has a very large jaw compared to the jaw of the human.

Kimbel, Yoel Rak, Donald C. Johanson, 2004-03-11 The book is the most in depth account of the fossil skull anatomy and evolutionary significance of the 3.6 million year old early human species *Australopithecus afarensis* Knowledge of this

species is pivotal to understanding early human evolution because 1 the sample of fossil remains of *A. afarensis* is among the most extensive for any early human species and the majority of remains are of taxonomically informative skulls and teeth 2 the wealth of material makes *A. afarensis* an indispensable point of reference for the interpretation of other fossil discoveries 3 the species occupies a time period that is the focus of current research to determine when where and why the human lineage first diversified into separate contemporaneous lines of descent Upon publication of this book this species will be among the most thoroughly documented extinct ancestors of humankind The main focus of the book its organizing principle is the first complete skull of *A. afarensis* specimen number A.L. 444-2 at the Hadar site Ethiopia the home of the remarkably complete 3.18 million year old skeleton known as Lucy found at Hadar by third author D. Johanson in 1974 Lucy and other fossils from Hadar together with those from the site of Laetoli in Tanzania were controversially attributed to the then brand new species *A. afarensis* by Johanson T. White and Y. Coppens in 1978 However a complete skull which would have quickly resolved much of the early debate over the species proved elusive until second author Y. Rak's discovery of the 444 skull in 1992 The book details the comparative anatomy of the new skull and the cast of its brain analyzed by R. Holloway and M. Huan as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar and analyzes the evolutionary significance of *A. afarensis* in the context of other critically important discoveries of earliest humans made in recent years In essence it summarizes the state of knowledge about one of the central subjects of current

Introduction to Human Evolutionary Anatomy Leslie Aiello, Christopher Dean, 1990-01-28 For students of Human Evolution the fossil evidence of skeletal remains is a prime source of information from which to reconstruct the form and lifestyle of the early hominids But how is this evidence to be fully and properly used by students with little or no anatomical training In this book an anthropologist and an anatomist have combined their skills to provide students and research workers with the essentials of anatomy and the means to apply these to investigations into hominid form and function Armed with the basic principles and relevant bones conclusions can be reached regarding the probable musculature stance brain size age weight and sex of a particular fossil specimen The sort of deductions which are possible are illustrated by reference back to contemporary apes and humans and a coherent picture of the history of hominid evolution emerges Written in a clear and concise style and profusely illustrated this book is a basic reference for all concerned with human evolution and a valuable companion both to laboratory practical sessions and to new research using fossil skeletons The Fossil Evidence for Human Evolution Wilfrid Edward Le Gros Clark, 1955 **Human Evolution** Veronica Armstrong, 2015 Human Origins Clark Spencer Larsen, Robert M. Matter, 1985 The authors present an introductory guide to the fossil record of prehuman human evolution through the presentation of detailed drawings of complete or nearly complete specimens that are representative of particular grades of evolution **Human Evolution** Alan Bilsborough, 1992-08-15 The past decade has seen significant advances in our understanding of human evolution Discoveries have presented extensive new evidence of fossil hominids whilst developments in dating techniques and the geological sciences have yielded a wealth of information permitting the reconstruction of the environment ecology and behaviour of past hominid communities *Buried Skulls* Amelia Khatri, AI, 2025-02-15 *Buried Skulls* offers a captivating exploration into the ever evolving field of human evolution Challenging the traditional linear view of our ancestry the book delves into paleoanthropology presenting a more complex bush like model where multiple ancient hominin species coexisted It examines pivotal fossil discoveries such as those in Dmanisi Georgia and South Africa that defy easy categorization and force us to reconsider established timelines The book highlights the ambiguity of the fossil record using it as a catalyst for understanding our origins This book integrates insights from fields like genetics and climate science to provide a comprehensive view of human origins It also explores the impact of climate change and geographical isolation on the evolutionary trajectory of hominin skulls By embracing the complexity of the fossil record *Buried Skulls* emphasizes adaptation gene flow and environmental pressures in shaping our evolutionary trajectory The book progresses through carefully structured chapters beginning with the principles of paleoanthropology and culminating in a revised model of human evolution Human Evolution Milford H.
