Student Exploration: Populations and Samples

Vocabulary: frequency distribution, normal distribution, population, sample

1. How would you describe the shape of this distribution?

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

A **frequency distribution** indicates how many data points have each value or range of values. Suppose a large number of people were quizzed on how many U.S. state capitals they can name. The histogram to the right shows the frequency distribution of their results, with no studying.

In the blank graph at right, sketch what you think this frequency distribution might look like if the same people could study for 10 minutes before taking the quiz.

**Gizmo Warm-up**

In many cases, it is impractical to investigate every member of a **population**. Researchers often investigate a smaller **sample**, or subset, of the population. You can explore the accuracy of samples using the Populations and Samples Gizmo™.

The red and blue histograms in the Gizmo are approximations of the frequency distributions described above: U.S. state capitals named, with no studying (red) and with studying (blue).

What is the mean of each distribution? Red mean: Blue mean:

Move the **Simulation speed** slider all the way to the left. Click **Play** ( ) to start taking samples from each distribution. Click **Pause** ( ) when the sample size  $n$  is about 10.

What is the mean of each sample? Red mean: Blue mean:

How close are the sample means to the population means?

**Activity A:** Get the Gizmo ready:

**Sampling frequency distributions**

- Click **Reset** ( ).
- Check that the original distributions are shown.
