

Student Exploration: Rabbit Population by Season

Vocabulary: carrying capacity, density-dependent limiting factor, density-independent limiting factor, limiting factor, population, population density

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Suppose you had a pet rabbit. What would the rabbit need to stay alive and healthy?

A pet bunny would require the same essentials as any other animal would, food, water, and shelter. It should probably be placed in a room where it can be met with its ideal temperatures.

2. A female rabbit can give birth to over 40 baby rabbits a year. Suppose all of her offspring survived and reproduced, all of their offspring survived and reproduced, and so on. If that happened, in only eight years the mass of rabbits would exceed the mass of Earth!

So, why aren't we overrun with rabbits? What keeps the rabbit population in check?

Limiting factors and the food chain keep us from being overrun by rabbits. Rabbits can get eaten by other animals and there's not enough shelters, food for all the rabbits.
