

224 Exam #2

- Internal vs external validity
 - **Internal validity:** how close the measure of association we calculate in our study is to the truth
 - Achieve by minimizing differential misclassification, non-differential misclassification and confounding

- You have random errors and systematic errors
- **NMO = Nondifferential misclassification of outcome**
 - Does Not depend of on exposure status
- **NME= nondifferential misclassification of exposure**
 - Does Not depend on outcome status
 - In case control studies call this **recall error** → recall because that misclassification affect both diseased and non diseased equally
- **Information bias:** how you measure things, how do you get the information from participants in your study → the degree of wrongness reported in exposure or outcome for those with disease or those without disease or exposed vs unexposed
