Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: global warming, greenhouse effect, greenhouse gas, heat flow

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. What do you notice when you get into a car that has been sitting in the Sun for a while?
2. Why is the inside of the car so hot?
3. How would things be different if the car's windows were left open?

It is really hot.

It's hot because it's been sitting in the sun's heat for a while with nothing to cool it down.

If the car's windows were open it might be the same temperature as outside of the car instead of extremely hot.

Gizmo Warm-up

Like the windows of a car, **greenhouse gases** play a major role in regulating Earth's climate. Without the gases that trap heat in Earth's atmosphere, Earth would be a frigid desert like Mars (average temperature -55°C , or -67°F). Too much greenhouse gas and Earth could be a fiery inferno like Venus (average temperature 450°C , or 850°F).

On the *Greenhouse Effect* Gizmo, set the **Greenhouse gases** to 0% and the **Simulation speed** to **fast**.

1. Click **Play** (▶) and view the **BAR CHART** tab. The temperature will go up and down every day, but try to look at the overall trend. What happens to the temperature over time?

Over time the temperature can not get as hot as it used to. What I mean by this is that overtime the highest the temperature can go is a low number.

2. Now set the **Greenhouse gases** to 100% and let the simulation run for a while. How does a maximum amount of greenhouse gas affect the temperature?

After only about a week or 2 with the maximum amount of greenhouse gasses the temperature skyrocketed. Overtime the lowest the temperature can get is a really high
