

Name: _____ Date: _____

Student Exploration: Water Cycle

Vocabulary: aquifer, condensation, evaporation, freezing, glacier, melting, phase change, precipitation, reservoir, runoff, transpiration, water cycle

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

The water that comes out of your faucet at home used to be in the ocean. How did water get from the ocean to your water faucet? Water in the oceans evaporates by the sun, and then the water condensed to form clouds. The clouds moved over land, where they rained. Some of this rain fell into streams and rivers which led to a reservoir. The water was then pumped to my house.

Gizmo Warm-up

Water on Earth is always in motion. These motions form a repeating circuit called the **water cycle**. The *Water Cycle* Gizmo allows you to explore the different paths water takes as it moves from Earth's surface to the atmosphere and back.

1. Click **Oceans**. What percentage of Earth's water is found in the oceans? The water found is 97.25%.
2. Click **Atmosphere**. How does the Sun cause water to move from the oceans to the atmosphere? Ocean water is heated by the sun, causing it to evaporate into the atmosphere.
3. Click **Clouds**. How do clouds form? Clouds form by water evaporating in the atmosphere cools and condenses.
4. Click **Precip (rain)**. ("Pre 'p" is short for **precipitation**, or water falling to Earth's surface.)
