Student Exploration: Water Cycle

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: aquifer, condensation, evaporation, freezing, glacier, melting, phase change, precipitation, reservoir, runoff, transpiration, water cycle

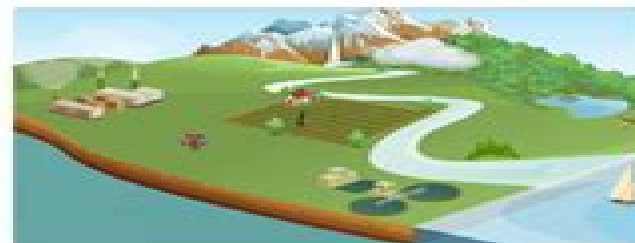

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

The water that comes out of your faucet at home used to be in the ocean. How did water get from the ocean to your water faucet?

Ocean water is sucked up into clouds, once clouds get heavy it rains and pours water into spots like fresh water rivers. From that we build our cities near water sources and filter it to use it.

Gizmo Warm-up

Water on Earth is always in motion. These motions form a repeating circuit called the **water cycle**. The Water Cycle Gizmo allows you to explore the different paths water takes as it moves from Earth's surface to the atmosphere and back.

1. Click **Oceans**. What percentage of Earth's water is found in the oceans?

97.25%

2. Click **Atmosphere**. How does the Sun cause water to move from the oceans to the atmosphere?

The sun evaporates the water into the clouds.

3. Click **Clouds**. How do clouds form?

When the evaporated water cools it turns into tiny droplets making clouds.

4. Click **Precip (rain)**. ("Precip" is short for **precipitation**, or water falling to Earth's surface.) What causes it to rain?

When the droplets grow large enough they drop and start to rain.

5. Click **Oceans** again, and then choose the **PATH** tab. Because it has the same beginning and end, the path is a complete cycle. How many steps does this cycle have?

5 steps.
