The Little Street Linda Stone-Ferrier,2022-08-23 An interdisciplinary study of the central role that the neighborhood played in seventeenth century Dutch painting and culture The neighborhood was a principal organizing structure of Dutch cities in the seventeenth century and each had its own regulations administrators social networks events and diverse population of residents Linda Stone Ferrier argues that this sense of community contributed to the steady demand for pictures portraying

aspects of this culture These paintings by such artists as Jan Steen and Pieter de Hooch reinforced the role and values of the neighborhood Through close readings of such works by Steen and De Hooch and among others Gerrit Dou Gabriel Metsu Jacob van Ruisdael and Johannes Vermeer Stone Ferrier deftly considers social history urban studies anthropology and women s studies in this penetrating exploration Her new interpretations of seventeenth century Dutch painting across genres scenes of streets domesticity professions and festivity challenge existing paradigms in Dutch art history

The Geometry of an Art Kirsti Andersen, 2008-11-23 Key Issues ver since the late 1970s when Pia Holdt a student of mine at the time and Jed Buchwald a colleague normally working in another field made E me aware of how fascinating the history of perspective constructions is I have wanted to know more My studies have resulted in the present book in which I am mainly concerned with describing how the understanding of the geometry behind perspective developed and how and to what extent new insights within the mathematical theory of perspective influenced the way the discipline was presented in textbooks In order to throw light on these aspects of the history of perspective I have chosen to focus upon a number of key questions that I have divided into two groups Questions Concerning the History of Geometrical Perspective How did geometrical constructions of perspective images emerge How were they understood mathematically How did the geometrical constructions give rise to a mathematical theory of perspective How did this theory evolve In connection with the last question it is natural to take up the following themes

[Phenomenologies of the City](#) Henriette Steiner, Maximilian Sternberg, 2016-03-09 Phenomenologies of the City Studies in the History and Philosophy of Architecture brings architecture and urbanism into dialogue with phenomenology Phenomenology has informed debate about the city from social sciences to cultural studies Within architecture however phenomenological inquiry has been neglecting the question of the city Addressing this lacuna this book suggests that the city presents not only the richest but also the politically most urgent horizon of reference for philosophical reflection on the cultural and ethical dimensions of architecture The contributors to this volume are architects and scholars of urbanism Some have backgrounds in literature history religious studies and art history The book features 16 chapters by younger scholars as well as established thinkers including Peter Carl David Leatherbarrow Alberto P rez Gomez Wendy Pullan and Dalibor Vesely Rather than developing a single theoretical statement the book addresses architecture s

relationship with the city in a wide range of historical and contemporary contexts The chapters trace hidden genealogies and explore the ruptures as much as the persistence of recurrent cultural motifs Together these interconnected phenomenologies of the city raise simple but fundamental questions What is the city for how is it ordered and how can it be understood The book does not advocate a return to a naive sense of unity or order Rather it investigates how architecture can generate meaning and forge as well as contest social and cultural representations
