## • Absolute Ages of Rocks

What are some methods used to find the absolute age?

absolute dating  
age  
dates

absolute  
radiometric  
dates (20)

radiometric  
isotopes/ratios  
numbers (2/20)

Besides relative dating, geologists use another method to determine in years the \_\_\_\_\_ of rocks and other objects. It's called \_\_\_\_\_.

It's a process that measures proportion of the \_\_\_\_\_ in objects.

Elements you have shown with different numbers of \_\_\_\_\_ in their nuclei.  
Some atoms \_\_\_\_\_ undergo a process of \_\_\_\_\_ decay. When the isotopes decay, a new \_\_\_\_\_ is formed. An example of this decay is the change of the isotope \_\_\_\_\_ to \_\_\_\_\_.

radioactive  
daughter products  
half-life

isotopes (4)  
parent material

radioactive dating  
radioisotopes

Another example of decaying isotopes in the isotope \_\_\_\_\_ which decays to \_\_\_\_\_. The original isotope in this process is called the \_\_\_\_\_ The isotope that results from the decay is the \_\_\_\_\_.

Using radioactive \_\_\_\_\_, you can find out at which it decays to the \_\_\_\_\_ This ratio known as the \_\_\_\_\_.

Calculating the absolute age of a rock is called \_\_\_\_\_ Using before this was possible, a British scientist estimated that Earth was billions of years old. He used the principle called \_\_\_\_\_ which states that Earth's processes including today are similar to those that occurred in the past.

Geyh,Helmut Schleicher,2012-07-05 With the growing recognition during the last two centuries that the Earth has an immense age and processes over long periods of time have changed the morphology and composition of the Earth s crust geologists have become increasingly interested in determination of absolute ages A relative geochronology was established on the basis of the lithostratigraphic and biostratigraphic principles developed during the last century With the discovery of radioactivity the basis for a new geoscientific discipline geochronology was established Rutherford 1906 It is the study of geological time based mainly on the time signatures provided by the isotopic composition in geologic materials The isotopic signature in a rock yields more information than that provided by the geochemical signature alone because it reflects the origin and history of the element in the rock The aim of geochronology is to calibrate and standardize chronostratigraphic scales to develop geological time scales that have a sensitive or at least useful resolution in order to place the geological events in the correct chronological order and to assign their proper time spans In practice the application of geochronology is much wider because the data in the natural archives often provide information on the origin genesis and history of the materials This of course requires an understanding of the geochemical behavior of the substances involved
