HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its parts.

Physiology

The study of the function of the human body and its parts.

Structural levels

Studying the human body at the structural level involves understanding the following levels:

- 1. **Chemical level** - study of the chemical composition of the body.
- 2. **Cellular level** - study of the structure and function of cells.
- 3. **Tissue level** - study of the structure and function of tissues.
- 4. **Organ level** - study of the structure and function of organs.
- 5. **System level** - study of the structure and function of body systems.
- 6. **Organism level** - study of the structure and function of the whole body.

CELLS AND TISSUES

Cells are the basic units of structure and function of the body.

Organization of cellular levels

Cells are organized into tissues, which are organized into organs.

Organs are organized into systems, which are organized into the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

The **organelle** is the structure within the cell that performs a specific function.

1. **Nucleus** - contains the genetic material (DNA) and controls the cell's activities.

2. **Mitochondrion** - the site of cellular respiration, where energy is produced.

3. **Golgi apparatus** - the site of protein synthesis and transport.

4. **Endoplasmic reticulum** - the site of protein synthesis and transport.

5. **Cytoplasm** - the fluid medium in which organelles are suspended.

ORGANS

Organs are structures made up of different types of tissues working together.

1. **Heart** - pumps blood throughout the body.

2. **Lungs** - exchange gases between the body and the environment.

3. **Stomach** - digests food and absorbs nutrients.

4. **Intestines** - absorb nutrients and eliminate waste.

7. **Bladder** - stores urine.

8. **Uterus/Vagina** - site of fetal development and childbirth.

9. **Testes** - produce sperm and testosterone.

10. **Prostate** - gland that produces prostatic fluid.

11. **Rectum** - stores feces before elimination.

12. **Anus** - eliminates waste from the body.
