[Statistical Learning for Big Dependent Data](#) Daniel Peña,Ruey S. Tsay,2021-05-04 Master advanced topics in the analysis of large dynamically dependent datasets with this insightful resource Statistical Learning with Big Dependent

Data delivers a comprehensive presentation of the statistical and machine learning methods useful for analyzing and forecasting large and dynamically dependent data sets. The book presents automatic procedures for modelling and forecasting large sets of time series data. Beginning with some visualization tools, the book discusses procedures and methods for finding outliers, clusters, and other types of heterogeneity in big dependent data. It then introduces various dimension reduction methods including regularization and factor models such as regularized Lasso in the presence of dynamical dependence and dynamic factor models. The book also covers other forecasting procedures including index models, partial least squares, boosting, and now casting. It further presents machine learning methods including neural network, deep learning, classification, and regression trees, and random forests. Finally, procedures for modelling and forecasting spatio-temporal dependent data are also presented. Throughout the book, the advantages and disadvantages of the methods discussed are given. The book uses real world examples to demonstrate applications, including use of many R packages. Finally, an R package associated with the book is available to assist readers in reproducing the analyses of examples and to facilitate real applications.

Analysis of Big Dependent Data includes a wide variety of topics for modeling and understanding big dependent data like:

- New ways to plot large sets of time series.
- An automatic procedure to build univariate ARMA models for individual components of a large data set.
- Powerful outlier detection procedures for large sets of related time series.
- New methods for finding the number of clusters of time series and discrimination methods including vector support machines for time series.
- Broad coverage of dynamic factor models including new representations and estimation methods for generalized dynamic factor models.
- Discussion on the usefulness of lasso with time series and an evaluation of several machine learning procedures for forecasting large sets of time series.
- Forecasting large sets of time series with exogenous variables including discussions of index models, partial least squares, and boosting.
- Introduction of modern procedures for modeling and forecasting spatio-temporal data.

Perfect for PhD students and researchers in business, economics, engineering, and science. Statistical Learning with Big Dependent Data also belongs to the bookshelves of practitioners in these fields who hope to improve their understanding of statistical and machine learning methods for analyzing and forecasting big dependent data.
