**Mindset Mathematics** Jo Boaler, Jen Munson, Cathy Williams, 2018-02-26 Engage students in mathematics using growth mindset techniques. The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you will find a collection of low floor, high ceiling tasks that will help you do just that by looking at the big ideas at the fifth grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message: that they want to incorporate more brain science into their math instruction but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement with tasks that reflect the latest brain science on learning. Open, creative, and visual mathematics tasks have been shown to improve student test scores and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that there is no such thing as a math person; anyone can learn mathematics to high levels. Mistakes, struggle, and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

**Growing Mathematical Minds** Jennifer S. McCray, Jie-Qi Chen, Janet Eisenband Sorkin, 2018-09-03 Growing Mathematical Minds is the documentation of an innovative bi-directional process of connecting research and practice in early childhood mathematics. The book translates research on early mathematics from developmental psychology into terms that are meaningful to teachers and readily applicable in early childhood classrooms. It documents teacher responses and conveys their thoughts and questions back to representative researchers who reply in turn. In so doing, this highly useful book creates a conversation in which researchers and teachers each bring their expertise to bear in their communication about these topics, informed by the thinking, commitment, and experience of both groups. This helps us better understand how developmental psychology can improve math teaching and how math teaching can in turn inform developmental science. The book bridges the gap between research and practice, helping teachers to adopt evidence-based practices and apply cutting-edge research.

findings and prompting developmental researchers to consider their work within the framework of practice Growing Mathematical Minds identifies and elucidates research with profound implications for teaching children from three to eight years so they develop foundational math knowledge and skills positive attitudes toward math and basic abilities to think mathematically

**Rough Draft Math** Amanda Jansen, 2020 Most upper elementary middle and secondary students talk to perform right answers in math class meaning most older students hardly talk at all in math class and don't learn much math because we talk to learn In Rough Draft Math Amanda Jansen shares the power of infusing math class with the spirit of revision She shares the work she and teacher collaborators have done to teach students how to share their rough ideas knowing they can change them later
