National Labor Relations Board,2014 Neighbourhood nursing Elzana Odzakovic,2019-12-20 Background Recent policy is marked by a shift towards enabling people with dementia to remain at home and in their neighbourhoods yet little is known about the wider perspective of neighbourhood as an everyday place of connection practice and meaning in the lives of people with experience of dementia Aims The aim of this thesis is twofold The first aim is to explore the neighbourhood as an everyday place for people with experiences of dementia The second aim is to explore neighbourhood as a place for practice Methods and Designs Five studies are included in the thesis with both quantitative and qualitative designs Study I had a cross sectional exploratory and descriptive design A total cohort of 17 405 people with a dementia diagnosis were identified and matched with data about home care services and housing and were then associated with socio demographic factors in three county councils sterg tland Stockholm and V sterbotten Study II had a phenomenological design 14 community dwelling people diagnosed with dementia in the County of sterg tland participated using walking interviews Study III had an inductive and exploratory qualitative design including 14 community dwelling people living alone with dementia in England Scotland and Sweden involving multiple data collection methods Study IV had an inductive and explorative qualitative design that included 22 people with the lived personal and professional experiences of dementia and used semi structured individual and group interviews Study V had an inductive and explorative

qualitative design where the perspectives of 18 participants registered and specialist nurses were included using shadowing as the main method for data collection Findings In study I 72% of the cohort was living in ordinary housing and 28% in special housing of the total of 17 405 people with a dementia diagnosis Overall 52% of 17 405 people with dementia in three county councils sterg tland Stockholm and V sterbotten were living alone Study II revealed that walking in the neighbourhood was an integral part of their day to day activities that helped them to manage life with dementia Connection to nature by being outdoors was a restorative practice for people living with dementia Neighbourhood was often described as a social context although some participants living alone revealed that their social contacts were mainly staff working in municipal home care In study III participants across all three field sites channelled their efforts to stay connected to the neighbourhood into creating new ways of maintaining social networks and relationships By participating in several activities provided in the United Kingdom by the third sector and charitable groups and in Sweden by the municipalities bonds of friendship were created However the impact of stigma surrounding dementia was highlighted by the participants which caused experiences of involuntary solitude or loneliness Despite the impact of stigma participants took control over their lives by searching for new daily social connections in the neighbourhood and were by no means passive in the face of the challenges in everyday life In study IV the participants discussed how dementia was stigmatized in the community People living with dementia were often not being respected as active citizens with their own resources in the community Being socially active in a group or in public spaces were strategies to maintain a social role in the community Participants with different experiences of dementia wanted the day care centres and teams to be more centrally involved in person centred care and health promoting improvements Finally in study V participants struggled with the commonly held view of their role and their workplace within the health care system interpreting it as being invisible as if placed in a black box The tasks and responsibilities of the participants were shifting to assistant nurses neighbours and family members according to the socio economic level of the municipality Nonetheless the participants were clearly part of the neighbourhood The findings of this thesis have been integrated into a combined thematic analysis based on the five studies to reach an overall representation of people s experiences of neighbourhood as an everyday place and a place for practice in the context of dementia Five main themes and three sub themes emerged from the analysis 1 walkable attachment to the lived neighbourhood 2 daily activities promote health and well being 3 opportunities for social connections 4 just treat us as active citizens 5 neighbourhood a place for practice The analysis suggested the neighbourhood was not only described as a walkable social and citizenship arena in the context of dementia it was also a place where practice was ongoing around the clock studies II III IV and V because most of the people with dementia are living in ordinary housing study I Conclusion The thesis presents a new foundation and knowledge to understand neighbourhood as a place for everyday life and practice by applying a new lens for understanding The neighbourhood can be understood as a place linked by connections that people actively searched out and

where the meaning of place emerges via movement of the body through the world It is also a site where practices support everyday life for people with dementia especially for those living alone with dementia This points to the need to re think nursing practice where neighbourhood nursing as a formal model with a lifeworld perspective has to be established in dialogue with citizens Bakgrund Den senaste samhällsutvecklingen och de politiska ambitionerna har utgett alltmer från att göra det möjligt för personer med demenssjukdom att bo kvar allt längre i sina hem och grannskap Trots denna utveckling finns det lite kunskap utifrån det bredare perspektivet om grannskapet som en vardaglig plats för relationer omvårdnad samt vilken mening det har för personer som har erfarenhet av demens Syfte Syftet med avhandlingen var för det första att undersöka grannskapet som en plats i vardagen för personer som har erfarenheter av demens och för det andra att undersöka grannskapet som en plats för omvårdnad Design och metod Avhandlingen inkluderar fem delstudier med både kvalitativ och kvantitativ design Studie I hade en explorativ och beskrivande tvärsnittsdesign Totalt ingick det 17 405 personer med en demensdiagnos som identifierades och samlades med information av hemtjänstinsatser och boende Denna informationen förrenades sedan med de socio demografiska faktorerna i de tre regionerna stergård Stockholm och Västergötland Studie II hade en fenomenologisk design som inkluderade 14 personer som bodde i ett eget boende med en demensdiagnos i stergårdslän och som deltog i promenadintervjuer Studie III hade en induktiv och beskrivande kvalitativ design vilket inkluderade 14 personer som bodde ensamma i ett eget boende med en demensdiagnos i England Skottland och Sverige De 14 personer som bodde i ett eget boende med en demensdiagnos i Studie III deltog i flera datainsamlingsmetoder Studie IV hade en induktiv och beskrivande kvalitativ design som inkluderade 22 personer med levda personliga och professionella erfarenheter av demens som deltog i semistrukturerade individuella och gruppintervjuer Slutligen Studie V hade också en induktiv och beskrivande kvalitativ design där 18 deltagare legitimerade sjukskterskor och specialistsjukskterskor inkluderades skuggning som är den huvudsakliga metoden för datainsamlingen Resultat I Studie I fann vi att 72 % av den totala befolkningen av 17 405 personer med en demensdiagnos bodde i ordinarie boende och 28 % i särskilt boende Sammantaget bodde 52 % av de 17 405 personerna med demens i singelhushåll i de tre regionerna stergård Stockholm och Västergötland Studie II påvisade att promenader i grannskapet var en betydelsefull del av deras dagliga aktiviteter som hjälpte personer med en demensdiagnos att hantera ett liv med demens Att vara utomhus i naturen medförde att personer med demens knöt an till naturen och genom det terhöv sig Grannskapet beskrivs ofta som ett socialt sammanhang även om vissa deltagare som bodde ensamma berättade att deras sociala kontakter främst var med personalen som arbetade i den kommunala hemsjukvården och hemtjänsten I studie III beskrev personer med demens i England Skottland och Sverige hur de ansträngde sig för att hålla kvar kontakten med grannskapet men också hur de skapade nya sätt att upprätthålla och hitta nya sociala nätverk och kontakter Dessa vänskapsband skapades genom att delta i olika aktiviteter som tillhandahålls i England av tredje sektorn och vålgrenhetsgrupper och i Sverige av kommunerna även effekterna av stigmatiseringen kring att leva med demens betonades

av deltagarna de beskrev detta som en orsak till ofrivillig ensamhet. Trots påverkan av stigmatiseringen tog personerna med demens kontroll över sina liv genom att finna nya dagliga sociala kontakter i grannskapet. Personer med demens är intresserade av att anta nya utmaningar i vardagen. I studie IV diskuterade personerna med olika erfarenheter av demens hur demenssjukdomen som ett stigmatiserat tillstånd i samhället påverkade dem. De ansåg att deltagarna som lever med en demensdiagnos ofta inte respekterades som aktiva medborgare med sina egna resurser i samhället. Personerna med olika erfarenhet av demens framhöll också att vara socialt aktiv i en grupp eller i offentliga rum var strategier för att upprätthålla en social roll i samhället. Förutom betydelsen av det sociala livet påpekade personerna med olika erfarenheter av demens att de skulle önska att dagverksamheterna och demensteamerna skulle utgå mer utifrån personcentrerad värde och höjsofrånjande förhållningssätt. Slutligen i studie V observerades det hur legitimerade sjuksköterskor och specialistsjuksköterskor kämpade med den vanligt förekommande synen på deras profession och arbetsplatsen inom hälso- och sjukvården som gav sig uttryck som osynlig. Deras uppgifter och ansvar hade blivit försumade och allt mer hade överlåtits till undersköterskor, grannar och familjemedlemmar och kommunernas socioekonomiska status hade betydelse. Legitimerade sjuksköterskor och specialistsjuksköterskorna var en självklar del av grannskapet. Resultaten av denna avhandling har integrerats i en sammansatt tematisk analys baserad på de fem studierna för att ge en övergripande representation av människors upplevelser av grannskapet som en plats för det dagliga livet och omvärld med utgångspunkt utifrån erfarenheter av demens. Analysen resulterade i fem huvudteman och tre underteman: 1. anknytning till det existerande grannskapet via promenader, 2. dagliga aktiviteter för mångfald och välbefinnande, 3. möjligheter för sociala kontakter, 4. behandla oss som aktiva medborgare, 5. grannskapet som en plats för omvärld. Grannskapet beskrivs inte bara som en framkomlig social medborgarskapsarena i relation till demens utan var även en plats där sjuksköterskepraxis pågick dygnet runt. Studierna II, III, IV och V eftersom de flesta personer som lever med demens bor i ordinarie boende. Studie I. Konklusion. Avhandlingen presenterar ett nytt underlag och ny kunskap för att förstå grannskapet som en plats för dagligt liv och omvärld genom att använda ett nytt perspektiv för att förstå Grannskapet kan förstås som en plats förändrad genom förbindelser som människor aktivt söker efter och där betydelsen av grannskapet inträder genom kroppens rörelse ut mot världen. Det är också en plats där omvärld sker som i sin tur stärker vardagslivet för personer med demens särskilt för dem som lever ensamma med demens. Detta visar på behovet av att tänka om i praktiken vad det gäller omvärlden där omvärld i grannskapet som en modell med ett livsvärldsperspektiv behövs i dialog med medborgarna. Pozadina: Nedavni trend demencije ogleda se u ovome da osobe koje iver sa demencijom ostanu u ku i ili u susjedstvu ali jo uvijek nije poznato mnogo u iroj perspektivi koju nude ta susjedstva kao svakodnevno mjesto povezivanja medicinske njege te samog značaja uivotu onih koji iver sa demencijom.
