Word Association Thematic Analysis Mike Thelwall, 2021-02-02. This book explains the word association thematic analysis method with examples and gives practical advice for using it. It is primarily intended for social media researchers and students although the method is applicable to any collection of short texts. Many research projects involve analyzing sets of texts from the social web or elsewhere to get insights into issues opinions interests news discussions or communication styles. For example many studies have investigated reactions to Covid 19 social distancing restrictions conspiracy theories and anti vaccine sentiment on social media. This book describes word association thematic analysis a mixed methods strategy to identify themes within a collection of social web or other texts. It identifies these themes in the differences between subsets of the texts including female vs male vs nonbinary older vs newer country A vs country B positive vs negative sentiment high scoring vs low scoring or subtopic A vs subtopic B. It can also be used to identify the differences between a topic focused collection of texts and a reference collection. The method starts by automatically finding words that are statistically significantly more common in one subset than another then identifies the context of these words and groups them into themes. It is supported by the free Windows based software Mozdeh for data collection or importing and for the quantitative analysis stages.
