# Nwea Map Rit To Percentile Conversion 2014

**Branin Bowe, John Cronin**

## **Nwea Map Rit To Percentile Conversion 2014:**

Aligning the NWEA RIT Scale with the Maryland School Assessment (MSA) Branin Bowe, John Cronin, 2005 Recently NWEA completed a project to connect the scale of the Maryland School Assessment MSA with NWEA's RIT scale. One large school system participated in the study using test information from a group of over 24,000 students enrolled in third, fourth, and fifth grade who took both the MSA and NWEA reading tests in the spring of 2005. Information from these tests was used in a comprehensive study to identify the capacity of the RIT scale to predict success on the MSA and to identify performance level scores on the RIT scale that would indicate a good chance of success on this test. Three methodologies: linear regression, second order regression, and Rasch status on standards called Rasch SOS were used to derive estimates of cut scores. In each case, the most accurate of the three estimates was used to arrive at the recommended cut score seen in this report. The authors estimated cut scores for each of the performance levels at grades three, four, and five for reading. Contains 2 figures and 4 tables.

Aligning the NWEA RIT Scale with the South Carolina High School Assessment Program John Cronin, 2004 Each year South Carolina students participate in testing as part of the South Carolina assessment program. Students in grades 3 through 8 take the Palmetto Achievement Challenge Tests (PACT) in English, Language Arts, and Mathematics. Students in grade 10 take the High School Assessment Program (HSAP) in English, Language Arts, and mathematics. These tests serve as an important measure of student achievement for the state's accountability system. Results from these assessments are used to make state level decisions concerning education to meet Adequate Yearly Progress (AYP) reporting requirements of the No Child Left Behind Act (NCLB) and to inform schools and school districts of their performance. In addition, students must achieve Level 2 performance on the HSAP in order to graduate from high school. The South Carolina Department of Education has developed scales that are used to assign students to one of four performance levels on the HSAP. Level 2 is considered the level that represents passing performance. Many students who attend school in South Carolina also take tests developed in cooperation with the Northwest Evaluation Association (NWEA). These tests report student performance on a single cross grade scale which NWEA calls the RIT scale. This study investigated the relationship between the scales used for the HSAP assessments and the RIT scales used to report performance on NWEA tests. The study determined the reading, language usage, and mathematics RIT score equivalents for the HSAP performance levels in English, Language Arts, and Mathematics. Test records for more than 3,500 students were included in this study. Three methods generated an estimate of RIT cut scores that could be used to project HSAP performance levels. Rasch SOS methods generally produced the most accurate cut score estimates. Accuracy of predicting HSAP passing performance was above 88% for all subjects when using the best methodology. Type I errors never ranged above 6% when the best methodology was employed. Contains 12 tables and figures.
