## Introduction

This is the NX-8V2-Control Panel Installation Instructions.

Installations should only be done by trained professionals. Use this document to install the system with default settings that comply with UL requirements.

To install the keypad, other peripherals, and sensors, refer to the documentation for those devices.

## Installation

There are four slots for board insertions inside the metal enclosure, two on the top and two on the bottom. These allow the P.C. board to be positioned vertically (Figure 1 below). When you slide the board between the grooves of the slots, make sure the terminal strip is toward the front opening (toward you) to allow for the wire connections.

**Note:** Install the metal enclosure with the door opening from the top to bottom.

Figure 1: Board installation

## Network keypad maximum wire run

Table 1 below lists wire lengths for one keypad at the end of the wire. When connecting more than one keypad to the end of the wire, a higher gauge wire is required.

If no resistor is used, you may experience voltage leakage into the siren, which will cause these devices to output a small signal.
KP Data	Connect to the data terminal on the keypads and the expanders. Maximum number of devices (keypads plus expanders) is 32. See Maximum Wire Run table.
