

Loosen the three stator mounting screws and move the stator base so that the stamped line (A) on stator and the centerline of stator mounting screw hole will be in line. Then tighten the mounting screws. Start the engine again and maintain it at 4,000 rpm.

Fig. 8-4-2 Adjusting ignition timing

Check once more with timing light to see if the line stamped on flywheel rotor is aligned with the matching mark on the crankcase.

Note: The ignition timing has been accurately adjusted during the engine manufacturing process. Therefore, just aligning the line stamped on the stator with the centerline of stator mounting screw hole as described above should virtually ensure perfect timing.
