Mathematical Reasoning of Children and Adults Alina Galvão Spinillo, Síntria Labres Lautert, Rute Elizabete de Souza Rosa Borba, 2021-05-24 This book adopts an interdisciplinary approach to investigate the development of mathematical reasoning in both children and adults and to show how understanding the learner's cognitive processes can help teachers develop better strategies to teach mathematics. This contributed volume departs from the interdisciplinary field of psychology of mathematics education and brings together contributions by researchers from different fields and disciplines such as cognitive psychology neuroscience and mathematics education. The chapters are presented in the light of the three instances that permeate the entire book: the learner, the teacher and the teaching and learning process. Some of the chapters analyse the didactic challenges that teachers face in the classroom such as how to interpret students' reasoning, the use of digital technologies and their knowledge about mathematics. Other chapters examine students' opinions about mathematics and others analyse the ways in which students solve situations that involve basic and complex mathematical concepts. The approaches adopted in the description and interpretation of the data obtained in the studies documented in this book point out the limits, the development and the possibilities of students' thinking and present didactic and cognitive perspectives to the learning scenarios in different school settings. *Mathematical Reasoning of Children and Adults: Teaching and Learning from an Interdisciplinary Perspective* will be a valuable resource for both mathematics teachers and researchers studying the development of mathematical reasoning in different fields such as mathematics education, educational psychology, cognitive psychology and developmental psychology.

Mathematical Learning and Cognition in Early Childhood Katherine M. Robinson, Helena P. Osana, Donna Kotsopoulos, 2019-05-07 This book explores mathematical learning and cognition in early childhood from interdisciplinary perspectives including developmental psychology neuroscience cognitive psychology and education. It examines how infants and young children develop numerical and mathematical skills, why some children struggle to acquire basic abilities and how parents, caregivers and early childhood educators can promote early mathematical development. The first section of the book focuses on infancy and toddlerhood with a particular emphasis on the home environment and how parents can foster early mathematical skills to prepare their children for formal schooling. The second section examines topics in preschool and kindergarten such as the development of counting procedures and principles, the use of mathematics manipulatives in instruction and the impacts of early intervention.

The final part of the book focuses on particular instructional approaches in the elementary school years such as different additive concepts schema based instruction and methods of division Chapters analyze the ways children learn to think about work with and master the language of mathematical concepts as well as provide effective approaches to screening and intervention Included among the topics The relationship between early gender differences and future mathematical learning and participation The connection between mathematical and computational thinking Patterning abilities in young children Supporting children with learning difficulties and intellectual disabilities The effectiveness of tablets as elementary mathematics education tools Mathematical Learning and Cognition in Early Childhood is an essential resource for researchers graduate students and professionals in infancy and early childhood development child and school psychology neuroscience mathematics education educational psychology and social work [The Use and Interpretation of Educational Tests](#) Harry Andrew Greene,Albert Nels Jorgensen,1929 **Resources in Education** ,1992-04 **K-12 Mathematics Education In Israel: Issues And Innovations** Nitsa Movshovitz-hadar,2018-02-28 The book provides the reader with a multifaceted picture of mathematics education in Israel put into an international perspective where relevant It is intended to give an overview of a wide range of topics covering issues such as raising and maintaining motivation search for excellence treatment of difficulties teacher education language issues minorities issues curriculum changes over the first 70 years of the state of Israel and many more This includes aspects of research and practice into the teaching and learning of mathematics innovation developments policy achievements and implementation with some international comparison as well **Literacy Assessment and Intervention for Classroom Teachers** Beverly A.
