Statistics and Numeracy

The goal of this section is to describe some connections between numeracy (or quantitative literacy (QL)) and statistics and to demonstrate that statistical thinking is fundamentally different from mathematical thinking, even though mathematics is an essential tool for statistics. These observations support the conclusion that statistics can serve as one important (perhaps essential) vehicle for effecting improvements in the teaching of quantitative literacy in mathematical science departments and beyond.

Of the many definitions of numeracy, one that will serve well for current purposes is from the 1982 study in the UK called *Mathematics Counts*:

"an 'at homeness' with numbers and an ability to make use of mathematical skills which enables an individual to cope with the practical demands of everyday life."

Statistics has a similar goal of providing skills and habits of mind that allow individuals to understand and use quantitative information for improvement of life and work, and to do so with confidence rather than fear. That the tie between statistics and QL goes deeper than goals, however, can be demonstrated by looking at the expressions of QL formulated by Steen in *Mathematics and Democracy: The Case for Quantitative Literacy*. These include:

- Understanding comparative magnitudes of risk
- Understanding that unusual events (such as cancer clusters) can easily occur by chance alone
- Analyzing economic and demographic data to support or oppose policy proposals
- Appreciating common sources of bias in surveys
- Understanding how small samples can accurately predict public opinion
- Understanding how assumptions influence the behavior of mathematical models and how to use models to make decisions

All are statistical in nature and require statistical thinking for full appreciation.

Here are a few examples of the kinds of questions that may be posed in a curriculum that covers modern approaches to data analysis. They are essentially questions about quantitative literacy.

Q1. The following table gives the times each girl has recorded for seven 100 meter runs this year. Only one girl may compete in the upcoming tournament. Which girl would you select for the tournament and why?

Governing by Numbers Stephen Ball, 2018-10-11 Social science researchers have become increasingly attentive to the role of numbers in contemporary life Issues around big data national test results and output and performance statistics are now routinely reported and debated in the media Numbers are a powerful resource for governments as a means to manage and improve their populations and we are increasingly represented organized and driven by an economy of numbers which inserts itself

into more and more aspects of our lives This book critically addresses some of the ways in which numbers are deployed in educational governance and practice and some of the consequences of this deployment for what it means to be educated to teach and to learn Recognising that numbers do not simply represent but that they change things and have real effects allows us to move beyond a system where difficult and important issues about what we want from education and from teachers are side stepped in the push to improve our numbers This collection offers a set of starting points from which we might speak back to numbers drawing on research to explore how numbers change the way we think about ourselves and what we do This book was originally published as a special issue of the Journal of Education Policy
