Telemedicine in Low-Resource Settings Richard Wootton,2015-04-24

Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved over the last decade or so in a largely autonomous way Communication between them has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information A recent review identified seven telemedicine networks each of which had been in operation for at least five years and which provided store and forward telemedicine services to doctors in low and middle income countries These networks provide clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment

and retention in rural areas are also of interest Finally there is little published information about the performance of these telemedicine networks and methods for measuring it about how best to manage them and about how to share resources between them A collection of articles reporting the current evidence supporting the use of telemedicine in resource limited settings would build the evidence base and should provide a focus for future research It would also serve to raise the profile of this potentially important research field *Mental Health Services* Rita Thom,2000 Review of the titles listed in the Mental health services database as of November 2000 Volume includes a print out of the database Research and Discussions in Critical Discourses and Remedies in Global Health Education Ashti A.
