Nutrition Through The Life Cycle Rar:

Nutrition in Epigenetics Mihai D. Niculescu, Paul Haggarty, 2011-06-28 The study of epigenetics or how heritable changes in gene expression are regulated without modifying the coding DNA sequence has become an increasingly important field of study in recent years. Rapid developments in our understanding of the way in which gene function is modulated by the environment has revolutionized the way we think about human development and health. *Nutrition in Epigenetics* reviews the latest research looking at the interaction between genes and nutrients and the role they play together in maintaining human health. *Nutrition in Epigenetics* is divided into two primary parts. The first part provides key principles such as epigenetic mechanisms, developmental epigenetics, and the role of epigenetics in disease. The second part looks specifically at the application of epigenetics to the field of human nutrition. Chapters review the role of specific nutrients in modulating epigenetic status and the effect on health and disease. *Nutrition in Epigenetics* is an indispensable resource for researchers, professionals, and advanced students with an interest in human nutrition, epigenetics, and biomedical research.

Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience Aron K. Barbey,Elizabeth J. Johnson,Margaret Joy Dauncey,2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition s impact on human cognition and brain health across the life span Research in this burgeoning field demonstrates that many aspects of nutrition from entire diets to specific nutrients affect brain structure and function and therefore have profound implications for understanding the nature of psychological health aging and disease The aim of this Research Topic in Frontiers in Aging Neuroscience is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following primary areas of

inquiry Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health clinical trials using nutritional supplementation have been predominately unsuccessful Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health

Moderators of Nutrition s Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular molecular and circuit levels Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age nutritional status genes environment and lifestyle in determining nutrition s impact on cognitive function and brain health

Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status brain health genes environment and lifestyle The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health aging and disease
