NWEA FAQ Northwest Evaluation Association, 2015 Northwest Evaluation Association NWEA conducts norming studies every several years to provide the best and most up to date information we can about student achievement and growth to better support educational decision making It is an important part of our commitment to our partners The most recent NWEA norms were released in July 2015 Just as we expect student performance to change with time norms of student performance will change correspondingly For 2015 several factors may have influenced how the US school age population performed on Measures of Academic Progress MAP assessments of language usage mathematics and reading over the 2011-12 2012-13 and 2013-14 school years Prominent among these possible factors are the introduction of Common Core instruction and Common Core versions of MAP But as with all empirical studies changes in scope and data necessitated changes in statistical design and analyses The methodological improvements introduced in the 2015 norms have resulted in a set of norms that are more representative of the US school age population than previous NWEA norms

Methodological changes involved differences in the way post stratification weights were developed and the way growth was modeled. Details of these changes are addressed more thoroughly in the 2015 Norms Study. As a result of the improved methodology, partners can expect some differences from previous norms as explained below.

Aligning the NWEA RIT Scale with the California Standards Test (CST) John Cronin, 2004. Many students who attend school in California also take paper or computerized adaptive tests developed in cooperation with the Northwest Evaluation Association (NWEA). These tests report student performance on a single cross grade scale which NWEA calls the RIT scale. This scale was developed using Rasch scaling methodologies. RIT based tests are used to inform a variety of educational decisions at the district, school, and classroom level. They are also used to monitor academic growth of students and cohorts. Districts choose whether to include these assessments in their local assessment programs. They are not state mandated. The versions of NWEA tests in use in California have been specifically aligned to match the content of local and California state curriculum standards. Because of this, it is believed there is a good match in content between the NWEA tests and the curriculum standards being used in California. In order to use the two testing systems to support each other, an alignment of the scores from the state and RIT based tests is as important as the curriculum alignment. The current study is an expansion of a preliminary study of alignment of the California Standards Tests (CST) that was performed using data from one California school system in June 2003. It is one of an ongoing series of studies that are being conducted to identify the relationships between NWEA tests and state mandated assessments. Studies of assessments in sixteen states have now been completed. The primary questions addressed in this study are:

1. To what extent do the same subject scores for the NWEA test correlate to the content similar subjects on the CST?
2. What fall and spring RIT scores correspond to various performance levels on the CST tests?
3. How well can proficient performance on the California assessments be predicted from fall and spring RIT scores?

Contains 24 tables and 9 figures.
