Security, Education and Development in Contemporary Africa M. Raymond Izarali, Oliver Masakure, Edward

Shizha, 2016-12-01 This volume delineates the critical link among security education and development in Africa and provides a multidisciplinary framework of analyses and possible solutions Africa has had a long history that embodies layers of mass scale criminality and exploitation not merely from neocolonial and apartheid policies but also from political greed This has impacted adversely on security education and development in a way that deprivation of education and underdevelopment in turn re creates security issues The volume aims firstly to help augment scholarly inquiry into the nexus among in security education and development through the multidisciplinary framework of analyses secondly to provide policymakers and educators with tools and a framework to comprehend the complexity and magnitude of the issues to which they ought to be sensitive and respond and finally to provide caregivers and childcare agencies of the state a comprehensible framework of underlying multifaceted sources of trauma experienced by children in extraordinary circumstances It is organized in four sections theoretical conceptualization on security and development country cases on security and development security and educational development and country cases on security and education Serving as a significant compass to understand and respond to the complex interplay and impact of security education and development in Africa it is of great use to graduates

and scholars interested in Africa Politics IPE security studies and development studies The Seabuckthorn Genome Prakash C. Sharma, 2022-11-23 This work is the first compilation of comprehensive deliberations on botany cytogenetics and sex determination genetic resources and diversity classical breeding molecular markers and genome sequence resources and application of omics technology including transcriptomics proteomics and metabolomics resources in the multipurpose medicinal plant seabuckthorn The book also presents a detailed narrative on antioxidative radioprotective nutraceutical and medicinal applications of seabuckthorn products A detailed treatment has been included on analytical techniques and processing technologies Altogether the book contains about 300 pages over 17 chapters contributed by globally reputed experts on the relevant field in this important plant species This book will be useful to the research students teachers and scientists in the academia and private sector engaged in horticulture genetics breeding molecular biology biotechnology and breeding The book will also be a useful source for workers involved in the development of plant based medicines nutraceuticals therapeutics and cosmeceuticals and extension workers involved in the development of rural farmers and small scale industries *Coupling and Uncoupling: Dynamic Control of Membrane Contacts* Dan Zhang, Yasunori Saheki, Benoît Kornmann, Junjie Hu, 2021-08-31 **Hairy Root Cultures Based Applications** Vikas Srivastava, Shakti Mehrotra, Sonal Mishra, 2020-06-27 The book discusses the various methods and protocols available in hairy root culture based research The utilization of Agrobacterium mediated genetic transformation and establishment of hairy root cultures has paved the way for large scale secondary metabolite production in medicinal plants Presenting recent research and offering insights from eminent research groups the book covers a range of topics related to hairy root based applications including i establishment of hairy roots and native production of SM ii yield enhancement strategies for increased SM production like elicitation iii hairy roots as a tool for value added applications such as plant microbe interaction characterization of plant genes and root biology studies As such it is an informative guide and experimental manual for researchers in diverse fields of plant biology **Emerging Bioinformatic Tools in Toxicogenomics** Danyel Jennen, Paul Jennings, 2020-02-27 Toxicogenomics was established as a merger of toxicology with genomics approaches and methodologies more than 15 years ago and considered of major value for studying toxic mechanisms of action in greater depth and for classification of toxic agents for predicting adverse human health risks While the original focus was on technological validation of in particular microarray based whole genome expression analysis transcriptomics mainly through cross comparing different platforms for data generation MAQC I it was soon appreciated that actually the wide variety of data analysis approaches represents the major source of inter study variation This led to early attempts towards harmonizing data analysis protocols focusing on microarray based models for predicting toxicological and clinical end points and on different methods for GWAS data MAQC II Simultaneously further technological developments geared by increasing insights into the complexity of cellular regulation enabled analyzing molecular perturbations across multiple genomics scales

epigenomics and microRNAs metabolomics While these were initially still based on microarray technology this is currently being phased out and replaced by a variety of next generation sequencing based methods enabling exploration of genomic responses to toxicants at even greater depth SEQC I This raises the demand for reliable and robust data analysis approaches ranging from harmonized bioinformatics concepts for preprocessing raw data to non supervised and supervised methods for capturing and integrating the dynamic perturbations of cell function across dose and time and thus retrieving mechanistic insights across multiple regulation scales Traditional toxicology focused on dose dependently determining apical endpoints of toxicity With the advent of toxicogenomics efforts towards better understanding underlying molecular mechanisms has led to the development of the concept of Adverse Outcome Pathways which are basically presented as a structural network of linearly related gene gene interactions regulating key events for inducing apical toxic endpoints of interest Impulse challenges from exposure of biological systems to toxic agents will however induce a cascade type of events presenting both adverse and adaptive processes thus requiring bioinformatics approaches and methods for complex dynamic data generated not only across dose but clearly also across time Currently time resolved toxicogenomics data sets are increasingly being assembled in the course of large scaled research projects for instance devoted towards developing toxicogenomics based predictive assays for evaluating chemical safety which are no longer animal based

Writing and Desire Jonathan Alexander, 2023-06-06 Writing and Desire is a sustained multimovement exploration of how writers particularly queer writers think and feel through desire as central to their writing practice In a time of political social global and ecological unrest how might we understand desire the desire for things to be different the desire for a better world as a crucial dimension of contemporary human experience What might such a recentering of desire offer us personally and politically And how is writing itself as one of the primary ways through which we express and explore ourselves central to the expression and exploration of desire Drawing on recent theoretical work in queer theory and the new materialism Jonathan Alexander studies a range of queer and trans writers and artists who center desire in their practice and argues that conceptualizing writing as desire allows us to reexperience both writing and our world as saturated with our dreams and wishes for change In a book both elegant and unsettling and by turns personal analytic and experimental Alexander challenges us and himself to think about desire and writing as the deepest manifestation of our hopes for the future

Microalgae Biotechnology for Development of Biofuel and Wastewater Treatment Md. Asraful Alam, Zhongming Wang, 2019-04-30 This book addresses microalgae which represent a very promising biomass resource for wastewater treatment and producing biofuels Accordingly microalgae are also an expanding sector in biofuels and wastewater treatment as can be seen in several high profile start ups from around the globe including Solix Biofuels Craig Venter's Synthetic Genomics PetroSun Chevron Corporation ENN Group etc In addition a number of recent studies and patent applications have confirmed the value of modern microalgae for biofuels production and wastewater treatment systems However substantial inconsistencies have been observed in terms of

system boundaries scope the cultivation of microalgae and oil extraction systems production costs and economic viability cost lowering components etc Moreover the downstream technologies and core principles involved in liquid fuel extraction from microalgae cells are still in their early stages and not always adequate for industrial production Accordingly multilateral co operation between universities research institutes governments stakeholders and researchers is called for in order to make microalgae biofuels economical Responding to this challenge the book begins with a general introduction to microalgae and the algae industry and subsequently discusses all major aspects of microalgal biotechnology from strain isolation and robust strain development to biofuel development refinement and wastewater treatment
