The Ethics of Personalised Medicine Jochen Vollmann, Verena Sandow, Jan Schildmann, 2016-03-09 In recent times the phrase personalised medicine has become the symbol of medical progress and a label for better health care in the future. However, a controversial debate has developed around whether these promises of better, more personal and more cost-efficient medicine are realistic. This book brings together leading researchers from across Europe and North America from both normative and empirical disciplines who take a more critical view of the often encountered hype associated with personalised medicine. Partially drawing on a four-year collaborative research project funded by the German Ministry for Education and Research, the book presents a multidisciplinary debate on the current state of research on the ethical, legal and social implications of personalised medicine. At a time when future health care is a topic of much discussion, this book provides valuable policy recommendations for the way forward. This study will be of interest to researchers from various disciplines including philosophy, bioethics, law and social sciences.

Kuroshio Current Takeyoshi Nagai, Hiroaki Saito, Koji Suzuki, Motomitsu Takahashi, 2019-07-02 An interdisciplinary study of the Kuroshio nutrient stream. The surface water of the Kuroshio, a western boundary current in the North Pacific Ocean, is nutrient-depleted and has relatively low primary productivity, yet abundant fish populations are supported in the region. This is called the Kuroshio Paradox. *Kuroshio Current: Physical, Biogeochemical and Ecosystem Dynamics* presents research from a multidisciplinary team that conducted observational and modeling studies to investigate this contradiction. This timely and important contribution to the ocean sciences literature provides a comprehensive analysis of the Kuroshio. Volume highlights include: New insights into the role of the Kuroshio as a nutrient stream; The first interdisciplinary examination of the Kuroshio Paradox; Reflections on the influence of the Kuroshio on Japanese culture; Research results on both the lower and higher trophic levels in the Kuroshio ecosystem; Comparisons of nutrient dynamics in the Kuroshio and Gulf Stream; Predictions of ecosystem responses to future climate variability.

Demski,John P. Wourms,2013-06-29 This volume had its origin in a symposium on the Reproduction and Development of Cartilaginous Fishes that was held at the annual meetings of the American Elasmobranch Society and the American Society of Ichthyologists and Herpetologists in Charleston South Carolina in 1990 The cartilaginous fishes class Chondrichthyes are a large and diverse group of fishes that include approximately 900 to 1100 living species of sharks skates rays and ratfishes Throughout their history which dates back at least 400 million years they have been a successful major component of the marine ecosystem The chondrichthyan fishes occupy a pivotal position in comparative and evolutionary studies of vertebrate reproduction and development They are the oldest surviving group of jawed vertebrates and they possess both the adult vertebrate Bauplan and the vertebrate program of embryonic development The major features of the female reproductive system including its embryonic origin structure physiological function and biochemistry apparently were established early in vertebrate evolution and are fully developed in chondrichthyan fishes These features of the female reproductive system have been retained during the evolution of the other classes of vertebrates Much the same can be said for the male reproductive system Moreover viviparity placental nourishment of developing embryos and the hormonal regulation of these events made an initial appearance in this group The 22 articles presented in this volume bring together a wide variety of complementary research by investigators from seven countries allowing us to broaden the scope and implications of our studies while identifying opportunities for future research The appearance of a volume on the reproduction and development of cartilaginous fishes is quite opportune The continued existence of these fishes which survived the great extinction events of Earth s history is nowthreatened by overexploitation unless immediate steps for their conservation are undertaken Knowledge of their reproduction and development not only is an end in itself but is of critical importance in devising successful conservation and resource management strategies **Revisiting Brucellosis in the Greater Yellowstone Area** National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Agriculture and Natural Resources,Committee on Revisiting Brucellosis in the Greater Yellowstone Area,2020-12-30 Brucellosis is a nationally and internationally regulated disease of livestock with significant consequences for animal health public health and international trade In cattle the primary cause of brucellosis is *Brucella abortus* a zoonotic bacterial pathogen that also

affects wildlife including bison and elk As a result of the Brucellosis Eradication Program that began in 1934 most of the country is now free of bovine brucellosis The Greater Yellowstone Area GYA where brucellosis is endemic in bison and elk is the last known *B abortus* reservoir in the United States The GYA is home to more than 5 500 bison that are the genetic descendants of the original free ranging bison herds that survived in the early 1900s and home to more than 125 000 elk whose habitats are managed through interagency efforts including the National Elk Refuge and 22 supplemental winter feedgrounds maintained in Wyoming In 1998 the National Research Council NRC issued a report Brucellosis in the Greater Yellowstone Area that reviewed the scientific knowledge regarding *B abortus* transmission among wildlife particularly bison and elk and cattle in the GYA Since the release of the 1998 report brucellosis has re emerged in domestic cattle and bison herds in that area Given the scientific and technological advances in two decades since that first report Revisiting Brucellosis in the Greater Yellowstone Area explores the factors associated with the increased transmission of brucellosis from wildlife to livestock the recent apparent expansion of brucellosis in non feedground elk and the desire to have science inform the course of any future actions in addressing brucellosis in the GYA
