Contributors focus on the way Tyndall and his correspondents developed their ideas through letters, periodicals, and scientific journals, and challenge previously held assumptions about who gained authority and how they attained and defended their position within the scientific community.

Gaast,2016-10-05 Providing a detailed examination of climate negotiations records since the 1990s this book shows that in

addition to agreeing on climate policy frameworks the negotiations process is of crucial importance to success Shedding light on the dynamics of international climate policymaking its respective chapters explore key milestones such as the Kyoto Protocol Marrakech Accords Cancun Agreement and Doha Framework The book identifies a minimum of three conditions that need to be fulfilled for successful climate negotiations the negotiations need to reflect the fact that climate change calls for global solutions the negotiation process must be flexible including multiple trajectories and several small steps and decisive tactical maneuvers need to be made as much can depend on for example personalities and the negotiating atmosphere With regard to the design of an international climate policy regime the main challenge presented has been the inability to agree on globally supported greenhouse gas emission reduction measures The book offers an excellent source of information for researchers policymakers and advisors alike *Counterterrorism* Benoît Gomis,2015-07-17

*Counterterrorism* Reassessing the Policy Response promotes a more nuanced understanding of the effectiveness of current counterterrorism practices and the need for reform It challenges government media and academic accounts that exaggerate terrorist threats particularly in comparison to other threats such as organized crime Author BenoGomis r *Communicating Climate Science - HC 254* Great Britain. Parliament. House of Commons. Select Committee on Science and Technology,Great Britain: Parliament: House of Commons: Science and Technology Committee,Andrew Miller,2014-04-02 The Government is failing to clearly and effectively communicate climate science to the public There is little evidence of co ordination amongst Government government agencies and public bodies on communicating climate science despite various policies at national and regional level to mitigate and adapt to climate change The mandate to act on climate can only be maintained if the electorate are convinced that the Government is acting on the basis of strong scientific evidence Ministers therefore need to do more to demonstrate that is the case and consistently reflect the Government approach in all their communications especially with the media The report also criticises the BBC for its reporting on the issue It points out that BBC News teams continue to make mistakes in their coverage of climate science by giving opinions and scientific fact the same weight The BBC is called to develop clear editorial guidelines for all commentators and presenters on the facts of climate that should be used to challenge statements from either side of the climate policy debate that stray too far from the scientific facts It is important that climate science is presented separately from any subsequent policy response Government should work with the learned societies and national academies to develop a source of information on climate science that is discrete from policy delivery comprehensible to the general public and responsive to both current developments and uncertainties in the science *Reading as a Philosophical Practice* Robert Piercey,2020-12-15 *Reading as a Philosophical Practice* asks why reading everyday reading for pleasure matters so profoundly to so many people Its answer is that reading is an implicitly philosophical activity To passionate readers it is a way of working through and taking a stand on certain fundamental questions about who and what we are how we should live and how we relate to other things The book examines the lessons

that the activity of reading seems to teach about selfhood morality and ontology and it tries to clarify the sometimes paradoxical claims that serious readers have made about it To do so it proposes an original theoretical framework based on Virginia Woolf s notion of the common reader and Alasdair MacIntyre s conception of practice It also asks whether reading can continue to play this role as paper is replaced by electronic screens
