**Network Security Attacks and Countermeasures** G., Dileep Kumar, Singh, Manoj Kumar, Jayanthi, M.K., 2016-01-18. Our world is increasingly driven by sophisticated networks of advanced computing technology, and the basic operation of everyday society is becoming increasingly vulnerable to those networks' shortcomings. The implementation and upkeep of a strong network defense is a substantial challenge beset not only by economic disincentives but also by an inherent logistical bias that grants advantage to attackers. *Network Security Attacks and Countermeasures* discusses the security and optimization of computer networks for use in a variety of disciplines and fields. Touching on such matters as mobile and VPN security, IP spoofing, and intrusion detection, this edited collection emboldens the efforts of researchers, academics, and network administrators working in both the public and private sectors. This edited compilation includes chapters covering topics such as attacks and countermeasures, mobile wireless networking, intrusion detection systems, next-generation firewalls, and more.

*Configuration for Wireless Network Based on Hotspot and CAPsMAN* Maya Sari, Azriel Christian Nurcahyo, 2024-08-02. In the present scenario, a growing need is stressed on having wireless networks both indoors and outdoors of diverse large environments like public areas, corporate offices, and government sectors, schools, and colleges. Traditional network deployments, on the other hand, generally rely on either bridging or rather on the full CSS deployment method while often making use of NAT on every access point. This causes interference with access points operating beyond the DHCP server lease limits with frequent loop issues arising within the wireless infrastructures. Thus, network administrators face the challenge of adding many simultaneous access points that do not have the ability to be integrated, thus giving rise to numerous challenges in meeting demand with reliable networking solutions that provide quick distribution of vouchers or enable user registrations per ID, especially during peak usage periods involving large numbers of users who are connected concurrently.
