Broca's Region Yosef Grodzinsky, Katrin Amunts, 2006-04-20 Broca's region has been in the news ever since scientists realized that particular cognitive functions could be localized to parts of the cerebral cortex Its discoverer Paul Broca was one of the first researchers to argue for a direct connection between a concrete behavior in this case the use of language and a specific cortical region Today Broca's region is perhaps the most famous part of the human brain and for over a century has persisted as the focus of intense research and numerous debates The name has even penetrated mainstream culture through popular science and the theater Broca's region is famous for a good reason As language is one of the most distinctive human traits the cognitive mechanisms that support it and the tissues in which these mechanisms are housed are also quite complex and so have the potential to reveal a lot not only about how words phrases sentences and grammatical rules are instantiated in neural tissue but also and more broadly about how brain function relates to behavior Paul Broca's discoveries were an important driving force behind the more general effort to relate complex behavior to particular parts of the cerebral cortex which significantly produced the first brain maps These early studies also however suffered from the use of crude techniques definitions and distinctions as well as from ill founded and misdirected assumptions Although much has been discovered since Broca's work even today these problems have not been completely solved Nonetheless particularly as a result of important advances made in neuroimaging during the past two decades Broca's region and all language areas are currently being investigated from every angle Indeed as the volume of research into the relations between brain and language has created several communities each with its own concepts methods and considerations it seemed that it was time to stop get together and reflect on the state of the art This book is the result of that collective reflection which took place primarily at the Broca's Region Workshop held in Julich and Aachen Germany in June 2004 In it Yosef Grodzinsky and Katrin Amunts tried to accomplish a nearly impossible task to mix intellectual traditions and cultures and juxtapose rather disparate bodies of knowledge styles of reasoning and forms of argumentation Participants were scientists with diverse backgrounds each invited to contribute his/her particular take with the hope that a coherent perhaps even novel picture would emerge All of the participants have a special interest in Broca's Region and represent the myriad angles from which we currently approach it neuroanatomy physiology evolutionary biology cognitive psychology clinical neurology functional imaging speech and language research computational biology and psycho neuro and theoretical linguistics The book's main chapters are the contributions of the Workshop's participants and their research teams Parts of the discussion during the Workshop are included to underscore the richness of viewpoints and to give readers an idea of the level of interaction that took place As Broca's region is such a historically significant concept and rich area this book contains a collection of classic and recent yet classic papers Along with cutting edge science Grodzinsky and Amunts want to remind readers of the celebrated past from which much can be learned The historical chapters include the first two papers written by Paul Broca as well some work by

two of the most important neurologists of the nineteenth century Ludwig Lichtheim and John Hughlings Jackson Also included are parts of twentieth century papers by Korbinian Brodmann Roman Jakobson Norman Geschwind Harold Goodglass and Jay Mohr Because this book both reflects the state of the art in Broca's region research and contains a tribute to its celebrated past it will be a valuable resource for student and professional researchers It will also stimulate further interdisciplinary research which is a significant contribution as the project called Broca's region encompassing the study of brain language relations is far from finished Diagnosis and Correction of Reading Problems Darrell Morris, 2013-10-29 This widely adopted text and teacher resource provides a comprehensive approach to assessing and remediating reading difficulties in grades K-6 Darrell Morris presents rich case studies of beginning and older readers struggling with different types of reading problems He shows how to administer a thorough diagnostic battery and provide instruction tailored to each student's needs In addition to one-to-one tutoring strategies small group and whole class applications are discussed Reproducible tools book lists and other user friendly materials can be photocopied from the book or downloaded and printed in a convenient 8 1/2 x 11 size New to This Edition Detailed explanations of how to adapt the techniques for classroom use The latest research findings pertaining to reading diagnosis Updated and expanded book lists Chapter on historical and theoretical foundations See also the Morris Informal Reading Inventory Preprimer through Grade 8 a complementary assessment tool that yields systematic data on K-8 students reading abilities Signed Languages Valerie Dively, 2001 Part Three Psycholinguistics offers the study Functional Consequences of Modality Spatial Coding in Working Memory for Signs

Strategy Instruction for Middle and Secondary Students with Mild Disabilities Greg Conderman, Laura Hedin, Val Bresnahan, 2013-02-14 This resource features evidence based strategies for teaching vocabulary reading written language math and science as well as study skills textbook skills and self regulation It provides informal assessments for every content area or skill addressed case studies that link assessment results IEP goals and learning strategies and application activities with questions and suggested responses Hemispheric Asymmetry Profiles During Early Reading Maria Elsa Porta, 2004

Working Memory Capacity Nelson Cowan, 2012-06-12 This book tackles the problem of working memory capacity limits and the future of research on this topic This book will be invaluable to working memory researchers and cognitive psychologists interested in memory **Speechreading by Humans and Machines** David G. Stork, Marcus E.

Hennecke, 2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to September 8 1995 the first interdisciplinary meeting devoted to the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi-modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first

week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the inevitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical engineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recognition are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth
