Space Division Multiple Access for Wireless Local Area Networks Patrick Vandenameele, Liesbet Van Der Perre, Marc Engels, 2006-04-18 Wireless Local Area Networks WLANs are experiencing a growing importance recently Whereas WLANs were primarily used for niche applications in the past they are now deployed as wireless extensions to computer networks The increase of the data rates from 2 Mbps up to 11 Mbps for roughly a constant price has played a major role in this breakthrough As a consequence an even greater success can be envisioned for the more recent OFDM based WLAN standards in the 5 GHz band that offer up to 54 Mbps At IMEC we have realized this potential already several years ago and have established a successful research program on OFDM based WLAN The program resulted in an operational prototype of a 5 GHz OFDM system The longer term goals of this program are to extend the indoor range of the WLAN systems up to 100 m and to increase the capacity above 100 Mbps Driven by these goals Patrick embarked on the usage of multiple antenna techniques and more in particular Space Division Multiple Access SDMA for WLAN as the topic for

his doctoral research During this research key contributions were made towards making SDMA for WLAN a reality To name a few A basic scheme for combining OFDM and SDMA was proposed Also realistic non linear detection methods were developed These methods achieve a high implementation efficiency by exploiting the parallelism of the data model and the frequency selectivity of the propagation channel *Guidelines for Securing Wireless Local Area Networks (WLANS)* U.s. Optimizing Wireless Communication Systems Francisco Rodrigo Porto Cavalcanti, Sören Andersson, 2009-07-31  
In June 2000 GTEL Wireless Telecommunications Research Group at the Federal University of Ceara was founded by Professor Rodrigo Cavalcanti and his colleagues with the mission of developing wireless communications technology and impact the development of the Brazilian telecommunications sector. From the start this research effort has been supported by Ericsson Research providing a dynamic environment where academia and industry together can address timely and relevant research challenges. This book summarizes much of the research output that has resulted from GTEL's efforts. It provides a comprehensive treatment of the physical and multiple access layers in mobile communication systems describing different generations of systems but with a focus on 3G systems. The team of Professor Cavalcanti has contributed scientifically to the development of this field and built up an impressive expertise. In the chapters that follow they share their views and knowledge on the underlying principles and technical trade-offs when designing the air interface of 3G systems. The complexity of 3G systems and the interaction between the physical and multiple access layers present a tremendous challenge when modeling, designing and analyzing the mobile communication system. Herein the authors tackle this problem in an impressive manner. Their work is very much in line with the developments in 3GPP providing a deeper understanding of the evolution of 3G and also future enhancements.
