ITS Sensors and Architectures for Traffic Management and Connected Vehicles Lawrence A. Klein, 2017-08-07 An intelligent transportation system ITS offers considerable opportunities for increasing the safety efficiency and predictability of traffic flow and reducing vehicle emissions Sensors or detectors enable the effective gathering of arterial and controlled access highway information in support of automatic incident detection active transportation and demand management traffic adaptive signal control and ramp and freeway metering and dispatching of emergency response providers As traffic flow sensors are integrated with big data sources such as connected and cooperative vehicles and cell phones and other Bluetooth enabled devices more accurate and timely traffic flow information can be obtained The book examines the roles of traffic management centers that serve cities counties and other regions and the collocation issues that ensue when multiple agencies share the same space It describes sensor applications and data requirements for several ITS strategies sensor technologies sensor installation initialization and field testing procedures and alternate sources of traffic

flow data The book addresses concerns related to the introduction of automated and connected vehicles and the benefits that systems engineering and national ITS architectures in the US Europe Japan and elsewhere bring to ITS Sensor and data fusion benefits to traffic management are described while the Bayesian and Dempster Shafer approaches to data fusion are discussed in more detail ITS Sensors and Architectures for Traffic Management and Connected Vehicles suits the needs of personnel in transportation institutes and highway agencies and students in undergraduate or graduate transportation engineering courses

Handbook of Automotive Human Factors Motoyuki Akamatsu,2019-06-14 Thanks to advances in computer technology in the last twenty years navigation system cabin environment control ACC advanced driver assistance system ADAS and automated driving have become a part of the automobile experience Improvement in technology enables us to design these with greater flexibility and provide greater value to the driver human centered design To achieve this research is required by laboratories automobile and auto parts manufacturers Although there has been a lot of effort in human factors research and development starting from basic research to product development the knowledge and experience has not been integrated optimally The aim of this book is to collect and review the information for researchers designers and developers to learn and apply them for further research and development of human centered design of future automotive technologies Automotive human factors include psychological physiological mathematical engineering and even sociological aspects This book offers valuable insights to applying the right approach in the right place
