from prehistoric times so that they pervade almost every aspect of life in the 21st century Most histories of mathematics look at the narrow role of professional mathematicians through the ages Professor Biggs sweeping tale is far wider Making use of new discoveries of artefacts and documents he reveals the part that mathematics has played in the human story and reflects on the nature of mathematics itself The story reveals the power and beauty of mathematical concepts which often belie their utilitarian origins The twin paradigms of logical justification and algorithmic calculation recur throughout the book Another theme is the relationship between mathematics and measurement of all kinds No other book covers money and measurement in this way Includes sections on The origins of banking and interest in ancient Mesopotamia Using mathematics to keep secrets in medieval times The impact of tax and trade on the development of mathematics Financial speculation in our information age The role mathematics plays today in keeping you safe Quite Right is a fascinating story suitable for anyone interested in the foundations of the mathematical world we live in Norman Biggs is Professor Emeritus of Mathematics at the London School of Economics He is the author of 12 books including a perennial best selling book Discrete Mathematics Oxford University Press He has a special interest in measurement and was Chair of the International Society of Weights and Scales Collectors from 2009 14 He served as a Vice President of the British Society for the History of Mathematics in 2014 and is an active member of the British Numismatic Society This is a history of mathematics book with a difference Instead of the usual chronological sequence of events presented with mathematical hindsight interpreting mathematical achievements from a modern point of view this book tries to see things more from the context of the time presenting the topics thematically rather than strictly chronologically and including results and problems only when they fit into the themes EL the level of exposition is first rate with a far greater fluency than most mathematical writers can attain EL I am very happy to recommend it wholeheartedly Professor Robin Wilson University of Oxford Education Outlook ,1913 **Geometrical Landscapes** Amir R.
