Air-Conditioning Refrigerant Service Guide Philip G Gott,1996-07-01 Packed with information on the servicing and retrofitting of air conditioning refrigerant systems so that shops and technicians can meet federal regulations satisfy customers and prevent damage to the environment The second edition of the Automotive Air Conditioning Refrigerant Service Guide was written to provide the latest information to automotive air conditioning service professionals in order to help them comply with federal certification requirements and prevent damage to the environment With an emphasis on proper recovery and recycling techniques for both R 12 and R 134a as well as the proper retrofitting of R 12 systems to R 134a the book will serve as a valuable instructional tool and resource for technicians Chapters cover General Safety and Service Precautions Refrigerant and System Properties Equipment for the Extraction only of Refrigerant and Equipment for the Recycling of Refrigerant Service Procedure for the Containment of Automotive Air Conditioning Refrigerants Retrofitting CFC 12 R 12 Mobile Air Conditioning Systems to HFC 134a R 134a *Safety Standards for Motor Vehicle Refrigerant Vapor Compression Systems* Interior Climate Control Vehicle OEM Committee,2011 This SAE Standard applies to refrigerant vapor compression systems that provide cooling and or heating for passenger cars light trucks and commercial vehicles on and off road that use automotive type mobile air conditioning MAC systems Large trucks buses and other vehicles that do not use

typical automotive a/c systems or use refrigerants not listed in this document are not covered by this standard. This standard covers any vehicle with a MAC system using a belt or electric motor driven compressor. This document provides standards for design, assembly, test, and service of MAC systems to minimize environmental health and safety impacts. Also included are cautionary statements for the service industry to alert technicians to the inadvisability and possible health or safety effects associated with venting refrigerant during service. It is not intended to restrict the use or further development of other types of refrigeration systems for mobile air conditioning applications. This document may be amended or additional safety standards created should other systems become practical. This document addresses only HFC 134a, R 134a, carbon dioxide, R 744, and HFO 1234yf, R 1234yf refrigerants. To prevent system contamination, all refrigerants used in mobile air conditioning vapor compression systems require unique service fittings and service equipment. The unique service fittings are intended to eliminate the potential for system refrigerant cross contamination during service activity. CFC 12, R 12, is no longer in use in new MAC systems. The service fitting description is maintained as a reference for older vehicles still in use. When retrofitting an R 12 system to use R 134a or when removing R 12, vehicle disposal, use service equipment designed for R 12 and certified to meet the requirements of SAE J1990, R 12 recovery and recycle equipment. HFC 152a is an A2 flammable refrigerant as classified by ASHRAE 34 and should be used only with a secondary loop application. However, until MAC systems are developed to use R 152a, HFC 152a, no SAE Standards for system design, service equipment, or service procedures have been established. The R 152a service fittings described within this Standard were established as part of the industry's evaluation of replacement refrigerants and are maintained for future design guidance and to prevent potential refrigerant cross contamination. This document covers refrigerant system design and safety related requirements for refrigerants used in mobile air conditioning MAC systems and is being revised to comprehend R 1234yf. The current wording of 4.1.1 prohibits refrigerants that are rated less than A2L, which would exclude R 152a. Later in the document, J639 defines the fittings for R 152a. The intent of this revision is to insure safe mobile air conditioning systems by forcing proper risk assessments and appropriate design solutions while correcting this conflict with regards to R152a.
