**South Africa's Post-Apartheid Military** Lindy Heineken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994 In South Africa's changed political state how has civilian control of the military been implemented and what does this mean for defence in a democracy This book presents an overview of the security environment how the mission focus of the military has changed and the implications for force procurement force preparation force employment and force sustainability The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force the effect of affirmative action on meritocracy recruitment and retention military veterans looking at the difficulties they face in reintegrating back into society and finding gainful employment gender equality and mainstreaming the rise of military unions and why a confrontational

instead of a more corporatist approach to labour relations has emerged HIV AIDS and the consequences this holds for the military in terms of its operational effectiveness In closing the author highlights key events that have caused the SANDF to become lost in transition and transformation spelling out some lessons learned The conclusions she draws are pertinent for the future of defence security and civil military relations of countries around the world

**Military Neuroscience and the Coming Age of Neurowarfare** Armin Krishnan,2016-10-04 Krishnan describes military applications of neuroscience research and emerging neurotechnology with relevance to the conduct of armed conflict and law enforcement This work builds upon literature by scholars such as Moreno and Giordano and fills an existing gap not only in terms of reviewing available and future neurotechnologies and relevant applications but by discussing how the military pursuit of these technologies fits into the overall strategic context The first to sketch future neurowarfare by looking at its potentials as well as its inherent limitations this book s main theme is how military neuroscience will enhance and possibly transform both classical psychological operations and cyber warfare Its core argument is that nonlethal strategies and tactics could become central to warfare in the first half of the twenty first century This creates both humanitarian opportunities in making war less bloody and burdensome as well as some unprecedented threats and dangers in terms of preserving freedom of thought and will in a coming age where minds can be manipulated with great precision

**Search and Rescue Robotics** Multiple Authors, 2017-08-23 In the event of large crises earthquakes typhoons floods a primordial task of the fire and rescue services is the search for human survivors on the incident site This is a complex and dangerous task which too often leads to loss of lives among the human crisis managers themselves This book explains how unmanned search can be added to the toolkit of the search and rescue workers offering a valuable tool to save human lives and to speed up the search and rescue process The introduction of robotic tools in the world of search and rescue is not straightforward due to the fact that the search and rescue context is extremely technology unfriendly meaning that very robust solutions which can be deployed extremely quickly are required Multiple research projects across the world are tackling this problem and in this book a special focus is placed on showcasing the results of the European Union ICARUS project on this subject The ICARUS project proposes to equip first responders with a comprehensive and integrated set of unmanned search and rescue tools to increase the situational awareness of human crisis managers so that more work can be done in a shorter amount of time The ICARUS tools consist of assistive unmanned air ground and sea vehicles equipped with victim detection sensors The unmanned vehicles collaborate as a coordinated team communicating via ad hoc cognitive radio networking To ensure optimal human robot collaboration these tools are seamlessly integrated into the command and control equipment of the human crisis managers and a set of training and support tools is provided to them in order to learn to use the ICARUS system The research leading to these results has received funding from the European Community's Seventh Framework Programme FP7 2007 2013 under grant agreement number 285417 The publishing of this book was funded by the EC FP7 Post Grant Open Access Pilot programme
