Capacity Building for Maritime Security Christian Bueger, Timothy Edmunds, Robert McCabe, 2020-10-09 This book studies recent attempts to restructure maritime security sectors through capacity building. It innovates both theoretically and empirically. It proposes a new framework for understanding maritime capacity building drawing on work in peacebuilding and security sector reform. The framework is then applied across empirical case studies from the Western Indian Ocean WIO region written by scholars from the Global South. The WIO region is a paradigmatic case to study maritime security and capacity building in action. Countries in the region face the full gamut of maritime security challenges while their indigenous capacities to deal with these are often weak. In consequence the region functions as an engine of innovation for maritime capacity building more widely. The lessons and best practices from the region have importance consequences for addressing maritime security across the globe.

Oceanic Strategy Vidhan Pathak, Raghvendra Kumar, 2024-12-03 This book introduces the concept of oceanic strategy expanding beyond traditional maritime and naval perspectives to include political economic socio cultural and ecological dimensions. It highlights the Indian Ocean Region as a critical arena for global power competition where the abundance of resources strategic significance and emerging interests have made it a new frontier for opportunity growth and conflict. By incorporating aspects like oceanic security resource exploration the blue economy and hydrography the book presents a broader view of strategic thought and the role of oceanic spaces in national and global geopolitics. Focusing on key players such as India China the US and other traditional and emerging powers the book analyses the reorientation of national interests and the intensifying struggle for dominance in the Indian Ocean. It argues that control over this region is crucial for attaining influence in 21st century geopolitics. The work also addresses non traditional security threats like piracy and transnational crime situating the Indian Ocean at the heart of modern geopolitical discourse. This book is an essential resource for students and scholars of international relations strategic studies and political science offering critical insights into the evolving power dynamics shaping the future of the Indian Ocean Region.

The Blue Economy in Sub-Saharan Africa DONALD L. SPARKS, 2021-06-16 The blue economy comprising coastal and marine resources offers vast benefits for sub Saharan Africa of the 53 countries and territories in the region 32 are coastal states there are 13 million sq km of maritime zones more than 90% of the region's exports and imports come by sea and the African Union hails the blue economy as the new frontier of African renaissance. Despite their importance the region's coastal and marine resources have been neither fully appreciated nor fully utilized. They are only now being recognized as being key to Africa's potential prosperity. As the region grows it has in general not taken adequate safeguards to protect these valuable resources. That is partly because some of the problems pollution for example are regional and know no borders. All too often short term gains

are made at the expense of the long term overfishing for example This book provides for the first time a study of the constraints and opportunities the blue economy offers for sub Saharan Africa It includes an introduction and overview sectoral analyses including tourism fisheries mineral resources culture shipping and maritime safety country case studies and analyses of regional and international efforts towards better coastal zone and marine management

Service-Oriented Mapping Jürgen Döllner,Markus Jobst,Peter Schmitz,2018-06-07 This book gathers various perspectives on modern map production Its primary focus is on the new paradigm of sharing and reuse which is based on decentralized service oriented access to spatial data sources Service Oriented Mapping is one of the main paradigms used to embed big data and distributed sources in modern map production without the need to own the sources To be stable and reliable this architecture requires specific frameworks tools and procedures In addition to the technological structures organizational aspects and geographic information system GIS capabilities provide powerful tools to make modern geoinformation management successful Addressing a range of aspects including the implementation of the semantic web in geoinformatics using big data for geospatial visualization standardization initiatives and the European spatial data infrastructure the book offers a comprehensive introduction to decentralized map production **Military Construction, Veterans Affairs, and Related Agencies Appropriations for 2015** United States.
