Air Traffic Organization Safety Management System Manual U. S. Department Transportation, Federal Administration, 2013-06-11

Air Traffic Organization's most fundamental imperative is to ensure the safety of the national airspace system. Safety can be effectively determined not only by the current absence of accidents but also the presence of safe conditions well into the future. Therefore, as we build the Next Generation Air Transportation System, the resulting cross-organizational changes to the NAS will require us to maintain an intensive, proactive, and systematic focus on safety. This focus is achieved through the implementation of the Safety Management System (SMS). The SMS formally integrates the ATO's safety-related operational processes, procedures, policies, and programs. SMS stresses safety assurance through the analysis of safety data and promotes a vibrant safety culture among our workforce. SMS also guarantees that every step we take toward NextGen, we are identifying, analyzing, and mitigating risk. This manual outlines the procedures and responsibilities regarding the functioning of the SMS. This manual was developed as the result of a consolidated agency-wide effort and reflects current international best practices. Safety experts and managers from across the FAA contributed to its development. This version of the manual marks an important next step toward a complete and integrated SMS in the FAA. In support of the effort to provide a safer National Airspace System (NAS) using the Safety Management System (SMS), this manual describes the Air Traffic Safety Oversight Service (AOV) safety requirements and responds to International Civil Aviation Organization (ICAO) safety process requirements for the Air Traffic Organization (ATO). The manual also provides guidance, processes, and tools to ATO personnel for managing the safety of the NAS, building on existing ATO safety management capabilities. This manual was created to provide specific operational process information to support the daily activities of ATO employees. It describes the functions, components, and principles of the SMS and provides the guidance to apply them effectively. The first chapter of this manual is an introduction to the SMS. The remaining chapters are organized by the four components of the SMS: safety policy, Safety Risk Management (SRM), safety assurance, and safety promotion. Each chapter is described as follows:

- a Chapter 1: SMS Overview: An SMS introduction that includes the definition of the SMS, how it originated in the ATO, and the objectives, scope, and products.
- b Chapter 2: Safety Policy: A description of the safety management requirements, which are consistent with AOV SMS and ICAO safety process requirements, roles and responsibilities related to the SMS, and the relationships among the different roles. Why safety oversight is necessary and responsibilities and authorities of AOV.
- c Chapter 3: Safety Risk Management: The types of changes evaluated for safety risk, processes and guidance available for determining the level of safety analysis required, detail and documentation required for safety analysis, SRM process, SRM terminology, tools and techniques, risk acceptance requirements, tracking required, NAS changes, and the development and approval of SRM documentation.
- d Chapter 4: Safety Assurance: The importance of safety reviews and evaluations in the SMS, assurance programs including the Air Traffic Evaluation and Auditing Program, the NAS Technical Evaluation Program, the Independent Operational Test and Evaluation process, Independent Safety Assessments.

and SRM audits importance of safety data types of data how data are collected and reported processes for reporting safety incidents and accidents relationship between incident investigations and SRM monitoring of mitigations through safety data tracking and analysis and existing safety data reporting documents and processes e Chapter 5 Safety Promotion What a safety culture is why it is important responsibilities within it and SMS training

Manuals Combined: U.S. Coast Guard Marine Safety Manual Volumes I, II and III, Over 2 300 total pages Titles included Marine Safety Manual Volume I Administration And Management Marine Safety Manual Volume II Materiel Inspection Marine Safety Manual Volume III Marine Industry Personnel Aviation Risk and Safety Management Roland Müller, Andreas Wittmer, Christopher Drax, 2014-03-31 The International Civil Aviation Organization's ICAO decision to require aviation organizations to adopt Safety Management Systems poses a major problem especially for small and medium sized aviation companies The complexity of regulations overstrains the aviation stakeholders who seek to fully advantage from them but have no clear guidance The aim of the book is to show the implementation of such a new system with pragmatic effort in order to gain a gradation for smaller operators This approach should illustrate the leeway in order to adapt the processes and to show the interfaces between Corporate Risk Management and Safety Management The book shows how to build a system with reasonable effort appropriate to the size and complexity of the specific operator It also gives inputs on the key aspects and how to effectively operate such a system with the various interfaces Furthermore the book highlights the importance of Corporate Risk Management independent of Safety Management Systems based on ICAO

Boy, 2017-11-01 The Handbook of Human Machine Interaction features 20 original chapters and a conclusion focusing on human machine interaction HMI from analysis design and evaluation perspectives It offers a comprehensive range of principles methods techniques and tools to provide the reader with a clear knowledge of the current academic and industry practice and debate that define the field The text considers physical cognitive social and emotional aspects and is illustrated by key application domains such as aerospace automotive medicine and defence Above all this volume is designed as a research guide that will both inform readers on the basics of human machine interaction from academic and industrial perspectives and also provide a view ahead at the means through which human centered designers including engineers and human factors specialists will attempt to design and develop human machine systems European Regulation of Aerodrome Safety Management Systems in the EASA System Henning Pfisterer, 2017-12-18 The implementation of Safety Management Systems at international airports was one of the most considerable changes in the regulatory framework for the operation and licensing of aerodromes in recent years However even more than five years after its inception it appears that the high expectations ICAO has placed on what has been designed as paradigm shift in the way of doing business in the airport industry were not materializing and Safety Management Systems appear at best to only marginally impact the safety performance of airports Based on the lessons learned from the implementation of SMS in Germany an ideal organizational set up for a most effective aerodrome SMS shall be designed This proposal of an ideal organizational set up shall be validated through a model implementation at a representative airport and subsequent long term observation in live operation This model implementation serves as a basis from which recommendations for a future European regulation of Aerodrome Safety Management Systems under the EASA system shall be derived **Safety Management Systems and their Origins** Corinne Bieder, 2022-11-28 Safety Management Systems and their Origins Insights from the Aviation Industry presents different perspectives on SMS to better decode what it means as a safety approach and what it implicitly conveys beyond safety The book uses the aviation industry as a basis for analyzing where the SMS stands in terms of safety enhancement Through a socio historical analysis of how SMSs emerged and spread across high risk industries and countries the book also explains the other stakes underpinning this new approach to safety management Features Explores SMS as it is implemented in aviation based on examples from several countries and regions namely the UK USA and Australia Presents a socio historical analysis of how SMSs emerged in high risk industries Provides insights to explain the existing limitations of SMS Proposes new avenues to reach beyond the limitations of SMS Discusses the COVID 19 pandemic within the framework of

risk analysis The book is intended for safety professionals and regulators as well as graduate students and researchers in safety science and engineering
