Samsung Gravity 2 S Manual:

Probabilistic modeling for sensor fusion with inertial measurements Manon Kok, 2016-12-15 In recent years inertial sensors have undergone major developments The quality of their measurements has improved while their cost has decreased leading to an increase in availability They can be found in stand alone sensor units so called inertial measurement units but are nowadays also present in for instance any modern smartphone in Wii controllers and in virtual reality headsets The term inertial sensor refers to the combination of accelerometers and gyroscopes These measure the external specific force and the angular velocity respectively Integration of their measurements provides information about the sensor's position and orientation However the position and orientation estimates obtained by simple integration suffer from drift and are therefore only accurate on a short time scale In order to improve these estimates we combine the inertial sensors with additional sensors and models To combine these different sources of information also called sensor fusion we make use of probabilistic models to take the uncertainty of the different sources of information into account The first contribution of this thesis is a tutorial paper that describes the signal processing foundations underlying position and orientation estimation using inertial sensors In a second contribution we use data from multiple inertial sensors placed on the human body to estimate the body's pose A biomechanical model encodes the knowledge about how the different body segments are connected to each other We also show how the structure inherent to this problem can be exploited This opens up for processing long data sets and for solving the problem in a distributed manner Inertial sensors can also be combined with time of arrival measurements from an ultrawideband UWB system We focus both on calibration of the UWB setup and on sensor fusion of the inertial and UWB measurements The UWB measurements are modeled by a tailored heavy tailed asymmetric distribution This distribution naturally handles the possibility of measurement delays due to multipath and non line of sight conditions while not allowing for the possibility of measurements arriving early i e traveling faster than the speed of light Finally inertial sensors can be combined with magnetometers We derive an algorithm that can calibrate a magnetometer for the presence of metallic objects attached to the sensor Furthermore the presence of metallic objects in the environment can be exploited by using them as a source of position information We present a method to build maps of the indoor magnetic field and experimentally show that if a map of the magnetic field is available accurate position estimates can be obtained by combining inertial and magnetometer measurements

Official Gazette of the United States Patent and Trademark Office, 2002 *Moral Disagreements in Business* Marian Eabrasu, 2018-09-10. This book disassembles the moral assessment of business practices into its constituent parts to identify and clarify the four key concepts that form the basis of important moral disagreements in business: personhood, ownership, harm, and consent. Moral bottom lines are those fundamental concepts in business ethics that ultimately account for our most resilient moral claims and unsurpassable convictions, and exploring them provides essential insights into the grounds on which we disagree in business ethics. This analysis is useful for students in business school looking to understand fundamental moral disagreements in business and for practitioners interested in connecting practice with their own moral intuitions. The book also challenges scholars of business ethics by arguing that we can reduce business ethics disagreements to these four issues. This is the most refreshing book on business ethics to appear in a long time. By focusing on personhood, ownership, harm, and consent, Eabrasu brings a new level of clarity and insight into disagreements on business ethic issues. Rather than reaching for an artificial utopian resolution, he embraces the challenge of explaining why we disagree. This is a must read for serious business ethic scholars.
