**Conservation Agriculture in Africa** Saidi Mkomwa, Amir H. Kassam, 2022-01-11

Tillage agriculture has led to widespread soil and ecosystem degradation globally and more particularly in the developing regions. This is especially so in Africa, where traditional agricultural practices have become unsustainable due to severe exploitation of natural resources with negative impacts on the environment and food system. In addition, agricultural land use in Africa today faces major challenges, including increased costs, climate change, and a need to transform to more sustainable production intensification systems. Conservation Agriculture has emerged as a major alternative, sustainable, climate-smart agriculture approach in Africa and has spread to many African countries in the past decade as more development and research, including in sustainable mechanization, has enabled its extension and uptake. It is key to transforming Africa's agriculture and food system given its ability to restore soil health, biodiversity, and productivity of millions of smallholder farms as well as larger-scale farms. This book is aimed at all agricultural stakeholders in the public, private, and civil sectors in Africa engaged in supporting the transformation of conventional tillage agriculture to Conservation Agriculture. The book will be of interest to researchers, academics, students, development stakeholders, public and private sector investors, and policy makers as well as institutional libraries across the world.
