Molecular Modeling for the Design of Novel Performance Chemicals and Materials

Beena Rai,2012-03-23 Molecular modeling MM tools offer significant benefits in the design of industrial chemical plants and material processing operations While the role of MM in biological fields is well established in most cases MM works as an accessory in novel products materials development rather than a tool for direct innovation As a result MM engineers and practitioners are often seized with the question How do I leverage these tools to develop novel materials or chemicals in my industry Molecular Modeling for the Design of Novel Performance Chemicals and Materials answers this important question via a simple and practical approach to the MM paradigm Using case studies it highlights the importance and usability of MM tools and techniques in various industrial applications The book presents detailed case studies demonstrating diverse applications such as mineral processing pharmaceuticals ceramics energy storage electronic materials paints coatings agrochemicals and personal care The book is divided into themed chapters covering a diverse range of industrial case studies from pharmaceuticals to cement While not going too in depth into fundamental aspects the book covers almost all paradigms of MM and references are provided for further learning The text includes more than 100 color illustrations of molecular models

Evaluation Method of Energy Consumption in Logistic Warehouse Systems Pawel Zajac,2015-09-14 This book focuses on guidelines for reducing the energy consumption in warehousing processes It presents a model of formal assessment for energy consumption in the context of storage system logistics as well as a computational model consisting of three sub models energy consumption models for forklifts and stacker cranes respectively and an energy intensity model for roller conveyors The concept model is based on the assumption that the unit load is received at a zero energy warehouse Subsequent handling transport and storage processes in which the unit load is moved vertically and horizontally through the system equate to changes in energy intensity within the logistics warehouse management system Energy recovery based on the handling equipment used can be collected in batteries The evaluation method takes into account the intensity of the energy supplied to the logistics system and reduces the storage of the recovered energy this figure represents the energy needed to pass through the logistics unit load storage system and can be expressed in an energy intensity map
