and policies to reduce individuals and organizations risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings

Vacca, 2006-10-16 1 INTRODUCTION With the increasing deployment of wireless networks 802 11 architecture in enterprise environments IT enterprises are working to implement security mechanisms that are equivalent to those existing today for wire based networks An important aspect of this is the need to provide secure access to the network for valid users

Existing wired network jacks are located inside buildings already secured from unauthorized access through the use of keys badge access and so forth A user must gain physical access to the building in order to plug a client computer into a network jack In contrast a wireless access point AP may be accessed from off the premises if the signal is detectable for instance from a parking lot adjacent to the building Thus wireless networks require secure access to the AP and the ability to isolate the AP from the internal private network prior to user authentication into the network domain Furthermore as enterprises strive to provide better availability of mission critical wireless data they also face the challenge of maintaining that data s security and integrity While each connection with a client a supplier or a enterprise partner can improve responsiveness and efficiency it also increases the vulnerability of enterprise wireless data to attack In such an environment wireless network security is becoming more important every day Also with the growing reliance on e commerce wireless network based services and the Internet enterprises are faced with an ever increasing responsibility to protect their systems from attack
